Leicester City Core Strategy - Adopted June 2014
Incorporating revised policies:-

• CS Policy 4. Strategic Regeneration Area; and
• CS Policy 10. Employment Opportunities.

(And resulting changes through-out the document)

The changes provide new development opportunities for offices in the city centre and require employment and training opportunities to be provided when large scale development is proposed.

This limited review of the Core Strategy is consistent with paragraph 153 of the NPPF which permits partial reviews of Local Plans to respond flexibly to changing circumstances. No other changes have been made.

FOREWORD

The last few years have been particularly exciting times for Leicester. We have made significant progress in delivering major shopping, leisure, business and housing regeneration. The whole of the Leicester community can all share in the successes of projects such as Highcross, Curve, LCB Depot, Colton Square and innovative new housing at Freemens Meadow. Many have been award winning and all have earned the City widespread recognition. They have been underpinned by a transformation of the streets and spaces in the City Centre, to create a cleaner, safer and more attractive environment.

These changes have been an enormous boost for the prosperity, attractiveness and reputation of the City, but they represent only the beginnings of an ambitious long term strategy. We have been working with our partners to create One Leicester: a 25 year journey to create a City of confidence, prosperity and beauty for all its residents, users and investors.

But there are challenging times ahead for all of us. The current economic difficulties are deep, unprecedented and global. We will continue to work with others to help meet One Leicester 25 year targets, but we must also work hard and creatively to find local solutions, to minimise the negative impacts of the recession and continue to deliver positive change.

We need to deliver new housing of the right type and in the right places. We must try to create the physical conditions that will attract major inward investment but ensure that local people can benefit from the growth of new businesses, jobs and training facilities. At the same time we need to protect and use our important and valued assets and resources to create thriving, attractive, safe places with facilities that people want and need, both in the City Centre and in local neighbourhoods.

The Core Strategy will be key to achieving these objectives. Through careful planning we can steer and encourage development activity, create certainty and confidence for investors and achieve an environment that will shape Leicester into a truly great City, where people will want and choose to be.

Cabinet Lead for Regeneration and Transport

Councillor Abdul Osman
1. **INTRODUCTION**

The Local Development Framework

1.1 Leicester City Council is preparing a new type of plan, known as the Local Development Framework (LDF) to replace the City of Leicester Local Plan, which was adopted in January 2006. The new system was introduced in the Planning and Compulsory Purchase Act 2004 to provide clear and up to date planning guidance for the delivery of new development.

1.2 The Local Plan was a single document but the LDF is made up of a number of separate documents, of which the Core Strategy is the most important. It will provide the context for subsequent planning documents, including a Site Allocations and Development Management Policies Development Plan Document, Supplementary Planning Documents and Masterplans. Diagram 1 below shows the relationship between these documents. An explanation of the role of these different documents is included in Appendix 1.

Diagram 1. Relationship of the Core Strategy to Other Plans and Strategies

1.3 The Leicester LDF must be broadly in line with National Planning Policy. The Development Plan Documents in the LDF will form Leicester's statutory Development Plan.
1.4 A 25 year vision for the City set out in Leicester’s Sustainable Community Strategy, ‘One Leicester: Shaping Britain’s Sustainable City’ was adopted by the Leicester Partnership in 2008. This gives the context for preparation of the LDF including the vision and priorities for the Core Strategy.

What Is A Core Strategy?

1.5 The Core Strategy is the first statutory Development Plan Document (DPD) of the Local Development Framework and it sets out the spatial planning strategy for the City until 2026. It includes a description of the issues facing the City, a vision of the City in the future and objectives and policies for new development.

1.6 Diagram 2 below shows the various stages in the preparation of Leicester’s Core Strategy.

Consultation and Community Engagement

1.7 This Core Strategy has been produced through consultation with the public, members of the Leicester Partnership, representatives of the property and development industry and organisations that contribute to the functioning of the City. Consultation was compliant with the requirements of the Council’s Statement of Community Involvement.

Policy Context

1.8 National Planning Policy is set out in Planning Policy Statements (PPS), Planning Policy Guidance Notes (PPG) and Circulars. The Core Strategy does not repeat National Policy unless it is essential in order to provide a coherent set of policies. If the Plan is silent on an issue it may be because the issue is adequately covered in National Policy.
1.9 The Core Strategy was prepared to be in conformity with the East Midlands Regional Spatial Strategy (RSS). On 6th July 2010 the Secretary of State announced the revocation of the RSS and it no longer constitutes part of the Development Plan for Leicester. This means that decisions on housing supply rest with the City Council. However the Council has endorsed the RSS housing figure for Leicester which is based on evidence, supplied by the City Council, on the capacity of the City to accommodate housing growth. Therefore the RSS housing figures and figures for the provision of sites for Gypsies and Travellers are retained in the Core Strategy.

1.10 The RSS established the concept of the Principal Urban Area (PUA) of Leicester as being the City plus the surrounding built up area in Leicestershire. This concept is retained in the Core Strategy, as shown on Diagram 3.

1.11 The City of Leicester Local Plan was adopted in January 2006 and policies in the plan were saved for three years because the new planning system had come into force. In January 2009 the Secretary of State directed which policies could be saved longer than three years. The tables in Appendix 2 illustrate which of these saved policies are to be retained and which replaced by the Core Strategy. The Local Plan Proposals Map 2006 remains the Proposals Map for the LDF. It will be replaced with a new Proposals Map to accompany the Site Allocations and Development Management Policies DPD.

Waste Development Framework

1.12 Leicester City Council and Leicestershire County Council have produced a Joint Waste Development Framework (WDF), which will replace the adopted Leicestershire, Leicester and Rutland Waste Local Plan and the existing Leicester City Waste Plan. The WDF includes a Core Strategy and Development Control Policy document and a Site Allocations document. The WDF Core Strategy and Development Control Policies DPD was adopted in October 2009. The Site Allocations DPD is scheduled for adoption in 2011.

The Central Leicestershire Local Transport Plan

1.14 Work has commenced on the Local Transport Plan for the period after 2011. The indications are that the transport policy will be very similar to that currently adopted with a greater emphasis on minimising the impacts of climate change.
Joint Working

1.15 The production of the Core Strategy has involved joint working with the County Council and the District Councils in Leicestershire. All these councils make up the Housing Market Area (HMA) and jointly they commissioned the Strategic Housing Market Assessment, which provides evidence for the Core Strategy. Joint studies have been carried out also on the need for employment land (HMA Employment Land Study), a HMA Growth Infrastructure Assessment, an Affordable Housing Viability Assessment and a Gypsies and Travellers’ Accommodation Needs Assessment.

Diagram 3. The Leicester and Leicestershire Housing Market Area

1.16 The HMA housing requirements identified through evidence that supported the RSS will entail significant urban extensions to Leicester. The Leicester City Core Strategy recognises the wider strategic development context of the Principal Urban Area (PUA) and the interrelationship of growth both within and on the edge, but outside, of the City boundary. Core Strategies are not yet in place for the whole PUA. They should reference the need to integrate development and growth both with the city and other districts to ensure a joined up approach continues to be taken between respective strategies.
1.17 The RSS identified Charnwood Borough and Blaby District as the broad locations for Sustainable Urban Extensions within or adjoining the Leicester PUA. The Core Strategy retains this terminology for strategic housing sites in or adjoining the PUA although the size and location of sites outside the City will be determined by the relevant local authorities. Proposals for Sustainable Urban Extensions outside the City involve joint planning and master-planning work, which is underway with Charnwood and Blaby District Councils in particular and through the newly established PUA Planning Officers Group.

Diagram 4. Leicester and Leicestershire HMA Governance Structure

1.18 Sub regional governance structures are in place to facilitate the cross boundary working necessary to co-ordinate the planning and delivery of growth in the City and adjoining areas. These are illustrated on Diagram 4. A Leadership Board includes representatives of the City, County and District Councils, the East Midlands Development Agency (EMDA), the Homes and Communities Agency and Economic Development Company “Prospect Leicestershire”. Amongst a series of Groups that report to the Leadership Board are two of particular relevance to the Core Strategy and successful joint working. These are firstly the Housing Planning and Infrastructure Group and its sub group, that is working with the HCA and EMDA on what is called the “Single Conversation” which will lead to a HMA wide Housing Investment Plan for 2011 onwards. This will carry forward the infrastructure investment carried out within the HMA through the New Growth Points initiative. And secondly the Transport Group which involves officers, transport operators and voluntary bodies who together are looking at Local Transport Plans and the co-ordination of transport with development across the sub region.
1.19 The sub regional governance arrangements oversee economic development activities in Leicester and Leicestershire. The City and County Councils have prepared a joint Economic Assessment and Strategy/Commissioning Statement in 2010 for the period to 2020. It provides a performance and commissioning framework for a productive economy and highly sustainable built environment with excellent infrastructure. It will help to co-ordinate policy and also investment from different funding streams and provides a sub regional context for the formulation of Core Strategies which have a statutory role in guiding the delivery of the key investment priorities for the City and sub region beyond.

Early Review

1.20 The City Council’s Core Strategy is part of the first generation of Core Strategies across the PUA and will set the context for the Core Strategies of adjoining authorities. Usually Core Strategies are expected to be reviewed at five yearly intervals. A review is an opportunity to assess progress in the delivery of growth towards the Core Strategy vision. However, uncertainty about the future economic climate makes it difficult to make longer term assurances about housing delivery, job creation and the availability of public and private finance to deliver this growth and the necessary supporting infrastructure. It is therefore proposed that there will be an early review of the Leicester City Core Strategy and that through the new governance structures, methods of ensuring co-ordinated or joint Core Strategies across the sub region, particularly the PUA, will be developed. Over the initial implementation period careful monitoring of achievement of the Core Strategy and what is happening across the sub region will be undertaken, particularly in relation to housing, employment, transport and infrastructure. This will influence the timing of the review.
2. What Leicester is like NOW

2.1 FEATURES OF THE CITY

Location

2.1.1 With around 290,000 residents, Leicester is the tenth largest city in England and a key focus of economic development, regeneration and growth in the East Midlands. It has an area of 7,335 hectares at the centre of a wider urban area in the heart of Leicestershire. With Derby and Nottingham it is in the Three Cities regional sub area, which has been designated a New Growth Point, where government funding will be made available for infrastructure to support major new development. 150,000 people live in the urban area adjoining the City. The Principal Urban Area of Leicester is identified as a main focus for new housing development.

2.1.2 Leicester provides employment, shopping, public administration, leisure, health care at three hospitals and further and higher education facilities for some 600,000 people. There has been substantial investment in the new Highcross shopping centre and cultural facilities such as Curve, the new Performing Arts Centre, to raise the status of the City as a regional centre. 70,000 workers, nearly half the workforce, commute into Leicester daily with over 38,000 people travelling into the City Centre at peak hours. The City’s two universities, the University of Leicester and De Montfort University have a combined total of around 25,500 full time students, plus 10,700 part time students. Leicester University is also one of Britain’s largest providers of distance learning for an additional 5,000 students.

2.1.3 The City of Leicester is a compact, densely populated urban area. It is undergoing a phase of major regeneration that affects many public highways, including Rights of Way and other non-motorised routes. The City Centre is very accessible by bus during the daytime as 96% of Leicester’s population lives within a 400m walk of a bus stop with less than a 30 minute journey to the City Centre. However, access to an equivalent service in the evening falls to 64% and for Sunday evenings to just 9%.

2.1.4 The Midland Mainline railway passes through the City Centre north to south and provides an excellent service to London, Loughborough, Nottingham and Derby. With the opening of the channel tunnel rail link to St. Pancras, Leicester now has direct access to the European high speed rail network. There are also rail lines west to Birmingham and east to Peterborough and Stansted Airport. East Midlands Airport is located in the north west of Leicestershire, accessed via the M1 and is the largest UK freight airport for dedicated freight aircraft.
2.1.5 The City enjoys excellent road access to the rest of the region and the UK via the M1 and M69 motorways, both part of the UK’s strategic road network. National cycle routes cross the City and it is on the national canal network.

Heritage

2.1.6 Leicester has a rich history from Roman, Saxon and Norman times, and in more recent centuries became one of the most significant centres for textile and hosiery manufacture in the UK. It has 10 Scheduled Monuments, over 400 Listed Buildings of special architectural or historic interest and 24 Conservation Areas.
2.1.7 The key historic landscape characteristics are illustrated in Diagram 5. The oldest buildings are in the historic core of the City and the outlying villages that are now within the City boundary. In Georgian times the City grew to the south of the Centre in the vicinity of New Walk. High density Victorian residential development typifies the areas of Westcotes, Belgrave, Clarendon Park, Highfields and Spinney Hills. Victorian and Edwardian villas of Stoneygate, Knighton and parts of Western Park are a legacy of Leicester’s prosperity as a manufacturing centre during that period. Suburban development of the inter war years included council developments of Northfields, Saffron Lane and Braunstone. The 1950 and 60’s boom in council housing development resulted in the large outer estates of, New Parks, Beaumont Leys, Eyres Monsell, Gilmorton, Netherhall and Thornby Lodge and the inner city estates of St. Matthew’s, St. Marks and St. Peters. In recent years most residential development has been concentrated in Hamilton and Beaumont Leys, as well as the City Centre.

Diversity

2.1.8 Leicester is home to a diverse range of ethnic and faith communities. The 2001 Census showed that Leicester has the highest proportion of residents of Indian origin in the country and there has been a sizeable growth in all the ethnic groups since 2001. Ethnic minority communities are located predominantly in the north of the City in Belgrave and Rushey Mead and to the east of the City Centre. For all these communities there is a pattern of movement to the outer suburbs and beyond the City boundaries. Since the 2001 Census there has been a growth of new communities such as those originating in Eastern Europe and Somalia.

Socio-Economic Characteristics

2.1.9 The Demographic Profile of Leicester identifies the neighbourhoods that fall within the lowest 5% most deprived of all areas in the country. These are predominantly on the western side of the City in parts of New Parks, Braunstone, Beaumont Leys, Mowmacre and Saffron estates which have a predominantly white population. The most deprived areas in the eastern half of the City are St. Matthew’s, St. Marks, Rowlatts Hill and Tailby Avenue estates and Spinney Hills. The location of these neighbourhoods is illustrated in the diagram in the margin. In general, the patterns of poverty and deprivation do not correspond with patterns of ethnicity.

2.1.10 The City has nearly double the national average of people claiming benefits. Average household incomes in Leicester are 20% below the national average and we have higher than average long-term unemployment. Overcrowding is also an issue, particularly for ethnic minority households, with the highest levels in Spinney Hills and Charnwood wards. Due to this, Leicester has been designated by the Government as an overcrowding Pathfinder authority and the Council have appointed an Overcrowding Project Officer to tackle the issue.
2.1.11 Leicester has less than half the national average of detached dwellings but it has a proportionally higher number of terraced dwellings. More affluent professional areas are Stoneygate and Knighton in the south east segment of the City and parts of Western Park and Evington. Students and young professionals tend to be concentrated in the southern and western parts of the City, particularly Clarendon Park and Westcotes where terraced housing predominates.

2.1.12 Compared to the national average, Leicester has a younger population profile with 25% aged 0-18 years. It also has a smaller percentage of pensioner households and lone pensioners, although the percentage is growing in line with national population trends. The more elderly populations are clustered on the outer fringes of the City, particularly on the east side.

2.1.13 In 2001 38% of households in Leicester owned no cars compared to 16.8% in Leicestershire and 27% nationally. Fewer households in Leicester owned more than one car compared to the other areas.

Education

2.1.14 Almost a quarter of people in Leicester of working age have no qualifications, roughly 10% higher than the national average and two thirds of residents have difficulty reading and writing English regardless of their ethnic origin. Leicester has been awarded £250m of funding for Building Schools for the Future, to modernise or rebuild all the City’s secondary schools.

2.1.15 Around 19% of residents are qualified to degree level or equivalent, 6% lower than the national average. Although both universities have nationally and internationally acclaimed departments, particularly in science and the creative industries, there is poor retention of graduates within the City and limited “spin-off” of business activities from the universities into the City’s economy.

Economy

2.1.16 Leicester has a larger manufacturing sector than the national average with an over-dependence on declining types of manufacturing, with low average incomes and limited job opportunities. More than 75% of the City’s economy depends on private business. However much of the existing stock of industrial premises is very old and our employment studies have identified a shortage of suitable industrial land. Most businesses are small, especially in textiles. There are high levels of business formation but a problem of high business failure rates. Approximately 15% of City residents commute out of the City. However employment areas outside of the City generally are not well served by public transport.

2.1.17 The highest number of people are employed in the Public Administration, Education & Health sectors. These are a major source of higher paid work and are expected to continue to grow strongly. Banking, finance, and insurance and the wholesale/retail sectors are also very significant. Leicester is working to restructure its economy through innovation to provide more service and knowledge based jobs.
2.1.18 The City Centre was ranked 11th in the country by Venuescore in 2009 following completion of the Highcross Centre. The out of town retail centre at Fosse Park is in competition for City Centre trade but other shopping centres in adjoining local authorities such as Oadby and Wigston may serve the needs of City residents in the suburbs. The centre at Beaumont Leys is the largest outside the City Centre, serving the northwest sector of the City and the adjoining area. Belgrave District Centre has a national reputation as a centre for serving Leicester’s Asian community.

Health

2.1.19 Leicester has high levels of inequality in life expectancy and health, both within the City and when compared to many other parts of the country. It has significant health priorities, many linked to obesity including diabetes, cardiovascular disease (CVD), cancer, infant mortality and mental health. The high levels of respiratory disease, particularly asthma, have lead to the identification of Air Quality Action Areas. The City also faces significant challenges around alcohol related crime and perceptions of drunken and rowdy behaviour.

Crime and Security

2.1.20 The City faces significant challenges around serious acquisitive crime, alcohol related crime and perceptions of drunken and rowdy behaviour. The Safer Leicester Partnership is working across the city in active partnership, to deliver long-term sustainable reductions in crime, disorder and substance misuse. It is seeking to establish and promote effective responses to reduce crime and the fear of crime.

Green Network

2.1.21 Leicester’s green space network consists of a variety of spaces of differing size, quality and function, comprising almost 25% of the City area. Approximately half the green space network is in the green wedges. The total quantity and quality of open space provision exceeds open space, sport and recreation needs in the City but provision is not distributed evenly across the City. The River Soar and Grand Union Canal corridor that flows from south to north through the City Centre is part of the Strategic River Corridor within the catchment of the River Trent. It is an important resource for wildlife and connects many open spaces along its path.

2.2 ISSUES FACING THE CITY

2.2.1 From the portrait of Leicester’s characteristics in the previous section, the responses to the Issues and Options consultation and the challenges identified in the Sustainable Community Plan, a range of issues have emerged which the Core Strategy needs to address:
People

- Delivery of housing to accommodate population growth in the City;
- Ensuring that the quality, type and affordability of housing meets the needs of the people of Leicester;
- Enabling every member of Leicester’s diverse community to participate equally, confidently and independently in everyday activities;
- Reducing the inequalities of health;
- Enabling people to feel safe; and
- Access to local facilities.

Prosperity

- Responding to an over-dependence on declining types of manufacturing, with low average incomes and limited job opportunities;
- Improving educational attainment and skills;
- Ensuring there is an adequate supply of employment land and workspace to meet local need and attract new businesses;
- Maximising the economic benefits from the two Universities, particularly their areas of excellence; science and creative industries and contribution to regeneration through university-related development;
- Increasing graduate retention; and
- Maintaining competitiveness of Leicester as a retail centre with other regional centres.

Place

- Improving the image and perception of the City, both for residents and people in other parts of the country;
- Making the City a more inclusive place which everyone can access safely, easily and with dignity;
- Ensuring that Leicester’s historic heritage is an integral part of City development;
- Making the City Centre more family friendly, with more leisure facilities and attractive for all communities;
- Ensuring that all residents, especially children have access to good quality open space for play and recreational use;
- Addressing strategic transport needs arising from housing and employment growth;
- Meeting local transport needs to reduce congestion;
- Reconnecting the City with the river and canal corridor;
- Minimising the effects of climate change to ensure that Leicester becomes an environmentally sustainable city;
- Ensuring wildlife and biodiversity are conserved or enhanced across the City; and
- Making efficient use of land.
3. How LEICESTER will be in 2026

3.1 VISION

3.1.1 The Leicester Partnership’s Sustainable Community Strategy, One Leicester sets out a 25 year vision for the City. The overall vision is to transform Leicester into Britain’s sustainable city and in doing so, to deliver a beautiful city with confident people and a new prosperity. It will be a great place to live but also somewhere that does not place a burden on the planet that we will come to regret in future years.

3.1.2 The aspects of the One Leicester vision that can be influenced by spatial planning are set out below.

Confident People

3.1.3 People of Leicester will feel confident about themselves, their neighbourhoods, their city and their future:

- People feel safe - there will be less fear of crime;
- People feel at home - people will be proud to live in Leicester; and
- Good places to live - there will be a choice of housing for everyone with an increased supply of affordable homes.

New Prosperity

3.1.4 We see Leicester as an ambitious and progressive city with renewed prosperity, where everyone meets his or her potential:

- Nobody is trapped by poverty - there will be enough jobs to ensure that everyone who wants employment will have the opportunity for meaningful work;
- We are ambitious and innovative - there will be a thriving business community that attracts jobs and investment to the City, retaining graduates from our universities; and
- People are healthy and active - health services will be easily accessible and there will be sporting, cultural and leisure facilities throughout the City.
Beautiful Place

3.1.5 Our vision is of a beautiful, vibrant, clean and green city that is a great place to live but that does not create an unacceptable burden on the planet:

- Less traffic - our City and streets will be places for people rather than cars and it will be easier to walk and cycle around the City;
- Clean and tidy streets - the City will be marked by beautiful and well designed buildings;
- A greener city - with lots more trees and green spaces and Leicester will have a low impact on the environment; and
- A vibrant City Centre - a great place for shopping leisure and culture where everyone feels safe.

3.2 PRIORITIES FOR ACTION

3.2.1 The Core Strategy includes proposals for transforming the City to achieve the following priorities for action set out in the One Leicester vision:

- Investing in our children;
- Planning for people not cars;
- Reducing our carbon footprint;
- Creating thriving, safe communities;
- Improving well being and health; and
- Investing in skills and enterprise.

3.3 OBJECTIVES FOR THE CORE STRATEGY

3.3.1 Spatial Objectives for the Core Strategy have been identified through the One Leicester Sustainable Community Strategy, the Regional Plan and public consultation. They have been grouped under the three themes of the One Leicester vision.

Confident People

3.3.2 Spatial Objective 1: To create thriving, safe and inclusive communities. To address social exclusion through the regeneration of disadvantaged areas to create strong, sustainable and safe neighbourhoods and by ensuring accessibility for all to shops, education, services, jobs, homes, recreation and open space for leisure and play.

3.3.3 Spatial Objective 2: To meet the needs of diverse communities. To meet the needs of all communities in an increasingly cohesive city that reflects and celebrates Leicester’s cultural diversity. To ensure that appropriate housing is available for all household types and will contribute to mixed communities. To improve availability of high quality cultural and leisure facilities, including places of worship, for Leicester’s diverse communities. To maximise community benefit arising from new development.
New Prosperity

3.3.4 Spatial Objective 3: To enable Leicester to become a thriving and diverse economy.
To promote prosperity and competitiveness through the development of new housing in sustainable mixed communities and good employment opportunities offering a wide range of jobs with supporting infrastructure.

3.3.5 Spatial Objective 4: To raise the standards of educational attainment, skills and training in Leicester.
To improve accessibility to education and training and so that Leicester’s residents and incoming students are able to develop the skills to contribute to Leicester’s economic growth.

3.3.6 Spatial Objective 5: To reduce inequalities of health between city communities.
To improve the health of all residents, through improved air quality, the availability of good quality well designed housing and access to health, leisure and recreation facilities. To ensure that no one is disadvantaged in accessing health care facilities wherever they live in the City.

Beautiful Place

3.3.7 Spatial Objective 6: To reduce the impact of development on climate change.
To take action to reduce the scale and impact of future climate change, in particular the risk of damage to life and property from flooding, especially through the location and design of new development. To promote the prudent use of resources and reduce overall energy use.

3.3.8 Spatial Objective 7: A high standard of design for new development.
To protect and enhance the quality of the City’s environment and to create safe and attractive places to live, play and work. To achieve high environmental standards and optimum social benefits through well designed development and by achieving high standards of access for disabled people and other disadvantaged groups.

3.3.9 Spatial Objective 8: To enable people to move in and around the City.
To improve accessibility to jobs, homes and services by developing integrated transport, ensuring the improvement of opportunities for walking, cycling and the use of high quality public transport to minimise the use of the car.

3.3.10 Spatial Objective 9: To develop a strong and vibrant City Centre.
To maintain and enhance the dominant position of the City Centre as a sub-regional centre and major retail, employment and leisure destination. To make it safe, attractive and accessible for all Leicester residents and visitors.
3.3.11  **Spatial Objective 10: To preserve and enhance Leicester's heritage.**
To achieve effective protection for the historic environment by avoiding significant harm and securing adequate mitigation where appropriate. To promote the conservation, enhancement, sensitive use and management of historic and cultural assets.

3.3.12  **Spatial Objective 11: To conserve, protect and enhance the City’s natural environment.**
To support the role of strategic and local green infrastructure in protecting and enhancing biodiversity and to ensure no net loss of priority habitats and species.

3.3.13  **Spatial Objective 12: To ensure access to high quality outdoor sports, children’s play provision and active recreation facilities for all residents.**
To improve Leicester’s strategic green network and use quality green space to provide an important recreational, social, health, and educational role. To improve access opportunities to quality open space as the distribution of this is uneven, with some neighbourhoods in the City being under provided.

3.4 INTEGRATION OF COMMUNITY STRATEGY AND CORE STRATEGY

3.4.1  The following chapter sets out the Core Strategy policies that make up a Strategy for Leicester to achieve the One Leicester vision and to meet the spatial objectives identified above. Diagram 6 illustrates how the Core Strategy policies have developed from the One Leicester Sustainable Community Strategy.
Diagram 6. Relationship of the One Leicester Sustainable Communities Strategy to the Core Strategy

Adopted July 2014
4.1 BACKGROUND

Strategic Housing Context

4.1.1 Evidence that supported housing figures in the East Midlands Regional Spatial Strategy (RSS) indicated a housing target of 25,600 homes to be built within Leicester City between 2006-2026.\(^1\)\(^2\) Leicester’s Principal Urban Area is considered to be the most sustainable location for development in the Housing Market Area and where there are major urban regeneration opportunities. To achieve this level of new provision will require a step change in housing delivery over the plan period, some 1,280 homes annually, a 50% increase on average annual house building rates achieved during 2001-2006. This target will be extremely challenging due to the housing market down turn during 2008/9/10 which has had a significant impact on new house building starts.

4.1.2 Leicester is part of the New Growth Point partnership programme with Central Government where additional funding is being provided towards a range of infrastructure projects that are aimed at unlocking the development potential of a number of strategic housing sites and to increase overall housing delivery. Within Leicester the priorities are the Strategic Regeneration Area, which has the potential to provide for a significant amount of the City’s future housing requirements and the development of the sustainable urban extensions at Hamilton and Ashton Green, which are all required to meet the City’s challenging housing targets. These sites are shown on Map 1: The Key Diagram. The City Council will work with key partners and stakeholders such as the Homes and Communities Agency and Prospect Leicestershire, the Economic Development Company Leicester and Leicestershire to deliver these targets.

4.1.3 The RSS proposed 14,200 homes for sites outside the City but in or adjoining the Leicester Principal Urban Area. With the revocation of the RSS the amount of housing and locations of housing sites outside the City will be determined through the adjoining District Council Core Strategies.

Sustainable Development

4.1.4 For Leicester to become Britain’s Sustainable City all aspects of development must meet rigorous standards of social, economic and environmental sustainability. The Council has undertaken an appraisal of all the realistic planning options for the Core Strategy, assessed against a range of objectives and sustainability criteria, and this has guided this preferred Strategy. A Sustainability Appraisal Report accompanies the Core Strategy Submission Document and is available to view at www.leicester.gov.uk/corestrategy.
4.1.5 The Core Strategy incorporates relevant environmental policies and includes a monitoring framework for the necessary actions to achieve environmental priorities set out in Leicester’s Eco-Management and Audit System, (EMAS).

Infrastructure

4.1.6 A Growth Infrastructure Assessment (GIA) covering the City and the Leicestershire Housing Market Area has been undertaken to establish strategic infrastructure needs resulting from planned growth, the costs and the sources of funding and responsibility for delivery. The GIA was jointly funded by the City Council, Leicestershire County Council, all districts in Leicestershire, and the East Midlands Development Agency. The GIA will assist partners and other service providers to plan, prioritise and co-ordinate the funding of infrastructure provision. The primary infrastructure essential for the delivery of major development sites and proposals in the Core Strategy is included at Appendix 7.

4.1.7 The GIA indicates that under the current prevailing economic conditions the costs of the infrastructure to deliver the housing growth are likely to significantly exceed the mainstream and private funding available. Inevitably, this will require prioritisation decisions to be made in enabling development and its deliverability over the whole plan period to 2026.1 & 2

4.2 OPTIONS

4.2.1 Leicester has limited options for growth but a number of different policy options were considered for the Core Strategy and tested against the sustainability objectives of the Sustainability Appraisal. The options for meeting the housing targets for the City are:

a) Prioritisation of new housing development on brownfield sites in the Strategic Regeneration Area. New Growth Point status is based on early delivery of housing in three key sites within the Strategic Regeneration Area, Waterside, Abbey Meadows and St. George’s. However, in the face of economic downturn, progress in delivering housing has slowed and investment will need to be further focused and predicted housing types and densities reassessed;

b) Delivery of housing on sites within the City that are housing allocations in the Local Plan, or that have current planning consents. These include the completion of development at Hamilton and development at Ashton Green;

c) Ensuring the efficient use of land and seeking to achieve higher densities in the right locations whilst ensuring a suitable mix and type of housing;

d) Remodelling and improvement of sites in existing residential areas to increase housing supply and create more balanced communities. This can mainly be achieved in residential estates which were built at low density and where new development can provide a wider choice of better quality housing;

2. See Policy CS19.
e) Redevelopment of poor quality, small industrial sites in residential areas that are no longer appropriate for industrial use; and

f) Subdivision of existing residential properties.

Preferred Option

4.2.2 The preferred strategy is a combination of options a to e above. There are opportunities for residential development in the whole of the Strategic Regeneration Area in addition to the sites identified for New Growth Point funding, which allows for the provision of a wider range of housing mix and types. The Growth Infrastructure Assessment shows that the ‘credit crunch’ provides the inescapable backdrop for the delivery of housing growth and associated infrastructure. This will have a significant impact on meeting housing delivery targets over the short to medium term.¹

4.2.3 The preferred approach is to seek development on deliverable and viable sites. Therefore Hamilton and Ashton Green have equal priority with the brownfield sites in the Strategic regeneration Area.

4.2.4 Smaller scale development in existing residential areas, either through infill schemes or redevelopment of poor quality industrial areas, can also contribute significantly to housing growth across the City, particularly in the short term as many are likely to have existing infrastructure in place. They are therefore also included in the preferred option.

4.2.5 The delivery of housing growth is not dependant on option f), although appropriate subdivision of properties can make a contribution to housing numbers. However the conversion of individual houses can reduce the availability of suitable accommodation to meet the needs of larger families in certain areas of the City and may adversely affect the character of an area.²

4.2.6 For growth outside the City boundary the Council will follow the option of working with adjoining local authorities to identify housing sites adjoining the Principal Urban Area outside the City boundary to meet sub regional housing targets in the Regional Plan.³

4.3 CORE PRINCIPLES

4.3.1 Core Strategy Policies 1-3 set out the overarching development principles for the City. CS Policy 1 establishes the main locations for development and key infrastructure as portrayed in the Key Diagram. CS Policies 2 and 3 give the context for development to meet the aspirations of the One Leicester vision of a beautiful place and to contribute to the reduction of the City’s carbon footprint.
LOCATION OF DEVELOPMENT

4.3.2 A key element for the development of the Leicester PUA is the restructuring of central Leicester, focusing on intervention within the Strategic Regeneration Area (SRA) comprising Waterside, Abbey Meadows, St. George's and new City Centre office development.¹ There are signs of this physical transformation taking shape all around the City Centre with new employment, cultural, retail and city living developments. However, it is recognised that there is still much to do, and the SRA sites present some considerable challenges which will require a sustained, joint approach over a number of years to achieve the physical and economic restructuring of central Leicester.

4.3.3 The strategy was to a significant extent predicated on development values being sufficient to i) remediate brownfield land and ii) to buy out existing use values for industrial premises, relocate those industries to tailor-made sites, and put down residential development in its place.

4.3.4 However the economic downturn since 2008 will have a significant impact on the delivery of planning targets over the short to medium term. More significantly, it will have a longer-term effect on the ability of the development process to fund the desired infrastructure. The critical factor for the delivery of housing targets will be the length of time that the market remains depressed and the speed of recovery.

Strategic Locations for Housing

4.3.5 The whole Strategic Regeneration Area is designated as a strategic location for housing. This creates greater opportunity for a range of housing densities to meet market demand. The development of a sustainable urban extension, with the necessary infrastructure, at Ashton Green will be brought forward so that it can provide a readily developable alternative location for new housing. Development at Hamilton will be completed by the development of three committed housing sites, taking advantage of existing infrastructure.

Non-Strategic Housing Sites

4.3.6 In addition to the larger strategic locations for housing there are a significant number of smaller sites that are either existing planning permissions, dwellings under construction, saved Local Plan housing allocations or other sites with potential to contribute to the housing supply. These are generally in existing residential areas, and are located across the whole of the City.²

Employment

4.3.7 In a period of recession and weak economic growth, the creation of new enterprises and job opportunities is a priority. To build on Leicester’s economic competitiveness, the priority will be to ensure a balanced supply of employment land and premises is available to meet the needs of local and new businesses and to attract inward investment. The Council and Leicester’s two Universities have a vital
role in promoting an innovative business and enterprise culture and supporting the growth of science based and creative industries. Further investment in the Leicester Science Park at Abbey Meadows will create a place of national significance for the creation of high skill, high wage jobs. Offices will be encouraged to locate in the City Centre.¹

Development Outside the City

4.3.8 To meet the housing targets for the Principal Urban Area outside the City, Charnwood District Council and Blaby District Council are exploring options for the location of Sustainable Urban Extensions (SUE) and their infrastructure requirements. The areas of search are shown on the Map 1: The Key Diagram.

Hierarchy of Centres

4.3.10 The City Centre will be the preferred location for retail, cultural and leisure uses that serve a city wide or sub regional catchment and for professional offices. Beaumont Leys Town Centre has a role serving retail and leisure needs of the north west sector of the City, including Ashton Green and beyond the City boundary. District centres can meet more local needs.

Strategic Links

4.3.11 As a sub regional centre Leicester has good rail and road links with its regional partners, Nottingham and Derby. It benefits from a fast rail link via London to Europe. Within the PUA emphasis is on developing good public transport links to reduce congestion, particularly with Ashton Green and Hamilton, the SUE’s, and the park and ride sites. A business case is being developed for a mass rapid transport system such as a tram.

Policy CS1 meets the following:

- Spatial Objective 1: To create thriving, safe communities;
- Spatial Objective 2: To meet the needs of diverse communities;
- Spatial Objective 3: To enable Leicester to become a thriving and diverse economy;
- Spatial Objective 5: To reduce inequalities of health between city communities;
- Spatial Objective 6: To reduce the impact of development on climate change;
- Spatial Objective 8: To enable people to move around the City;
- Spatial Objective 11: To conserve and protect the City’s natural environment;
- Spatial Objective 12: To ensure access to high quality outdoor sports, children’s play provision and active recreation facilities for all residents; and
- One Leicester Priorities: investing in our children, planning for people not cars, reducing our carbon footprint, creating thriving, safe communities, improving well being and health, investing in skills and enterprise.
CS POLICY 1. LOCATION OF DEVELOPMENT

The City Council will focus on the priorities for action set out in the One Leicester vision to ensure that Leicester develops as a sustainable city, with an improved quality of life for all its citizens.

Evidence that supported housing figures in the RSS identifies the amount of new housing that should take place in Leicester by 2026. The City Council will work with partners in the public, private and voluntary sectors to ensure the delivery of housing as part of sustainable mixed communities.

Development will be located in accordance with the spatial strategy outlined below and as shown on Map 1: The Key Diagram.

1. Residential development will take place in the following strategic locations in the City:¹
   • 54% in the Strategic Regeneration Area;
   • 16% in a sustainable urban extension at Ashton Green; and
   • 5% at Hamilton on committed housing sites.

The remaining 25% will be built on smaller non-strategic sites elsewhere in the City.

2. Significant new employment development will be focused in the following locations:²
   • City Centre offices;
   • Abbey Meadows Science and Innovation Park; and
   • Up to 10 hectares of land at Ashton Green.

3. The City Centre will be the focus for new retailing, leisure, and cultural development, to maximise choice in a central location and to enhance the scale, range, and appeal of the Centre. Offices and professional businesses will be encouraged to locate in the City Centre. Beaumont Leys Town Centre and the district centres will serve local needs.³

4. Residential, employment and City Centre growth will be supported by investment in an efficient and integrated public transport network and alternatives to using the car. This will focus on movement within the City, travel to work routes and links to London and other important centres, to include:⁴
   • Quality public transport corridors;
   • Park and ride;
   • Rail links;
   • Walking and cycling networks to provide links to key facilities; and
   • Investigating the feasibility of a tram network.

¹. See Policies CS4, CS5, CS6 and CS8.
². See Policies CS4, CS5 and CS10.
³. See Policies CS10 & CS12.
⁴. See Policy CS14.
5. University related developments consistent with continuing investment plans for development of the University of Leicester and De Montfort University and development related to Leicester College will be supported where they are in the interests of education, skills, enterprise or economic growth.

6. Development to improve the standard and efficiency of Leicester’s Hospitals and to provide health facilities to serve local communities will be supported.

7. Strategic Green Infrastructure to include:
   - Green Wedges; and
   - Maintenance of the River Soar and Grand Union Canal corridor as a resource for both wildlife and recreation as well as a focus for regeneration.

8. Development of housing and employment in the area of search for Sustainable Urban Extensions outside the City boundary, in or adjoining the PUA, will be supported where it integrates with city communities and infrastructure. 

1. See Policies CS13 & CS17.
2. See section on Sub Regional Growth.

- Park and Ride

*The Area of Search for Sustainable Urban Extensions reflects RSS policy and does not imply support for any particular location. Proposals for development outside the City will be determined by the relevant District Council.
CLIMATE CHANGE

4.3.12 Three National Planning Policy Statements set out how planning should contribute to:

- Reducing emissions and stabilising climate change;¹
- Technologies such as solar power, wind power, hydro power, geothermal and biomass;² and
- Planning to mitigate for the affects of flooding.³

4.3.13 Leicester became the UK's first Environment City on the 26 June 1990, and since the recent Stern Report, which discusses the economic effects of climate change, and the Pitt Review into flooding in England in 2007, the realities of the affects of climate change have been brought to the forefront of policy making in the UK. More recently the 'Code for Sustainable Homes' has highlighted the importance of sustainable construction methods.

4.3.14 The City Council is currently pursuing a climate change mitigation programme centred on housing, transport and organisational plans, and seeking to ensure its buildings and services can cope with changes in the climate in the future. This has been integrated with the statutory process of air quality management. The Council will provide advice and information and where possible, funding to developers on these issues as there are a variety of technologies available to reduce carbon emissions.

4.3.15 New development should be constructed and maintained in order to mitigate and adapt to potential climate change in the future. Government targets are that zero carbon should be reached in residential development and in new school buildings by 2016. Other development will be required to meet progressive carbon reduction targets towards zero carbon emissions by 2019.

4.3.16 Zero carbon development can be delivered through a combination of different approaches, including the Code for Sustainable Homes. The One Leicester vision is for zero carbon by 2013 for all development and the Council will support and advise developers on all the sustainable technologies and funding opportunities to work towards this target. Progressive carbon reduction targets will be applied with the aim of achieving local and national targets for zero carbon emissions. In policy terms, there is a large overlap both in causes and potential solutions between air quality and climate change, enabling 'win-win' solutions to be identified.

4.3.17 The City Council is looking to commission a supplier for the installation of a comprehensive Community Heating System and is examining the feasibility of a variety of locations.

4.3.18 New development should incorporate the principles of Sustainable Drainage Systems (SuDS) which aim to control surface water run-off as close to its origin as possible and often mimic the natural processes of undeveloped land. SuDS provide multiple flood risk, water quality, amenity and biodiversity benefits and the variety of SuDS techniques allows them to be widely applied to developments when appropriately designed. Techniques including green roofs, wetlands, ponds and swales will be encouraged.
The following Policy CS2 meets:

- Spatial Objective 6: To reduce the impact of development on climate change; and
- One Leicester priority:- Reducing our carbon footprint.

CS POLICY 2. ADDRESSING CLIMATE CHANGE AND FLOOD RISK

All development must mitigate and adapt to climate change and reduce greenhouse gas emissions. The Council will prepare a Climate Change Supplementary Planning Document to provide more detailed guidance and information on sustainable energy, building methods and climate change adaptation to minimise the impact of development.

The following principles provide the climate change policy context for the City:

1. Code for Sustainable Homes Level 3 will be required where feasible. This will be increased progressively over the plan period, where feasible, to support the Government’s longer term aspiration for new homes to achieve Level 6.\(^1\)

2. Best practice energy efficiency and sustainable construction methods, including waste management, should be incorporated in all aspects of development, with use of locally sourced and recycled materials where possible, and designed to high energy and water efficiency standards.

3. Wherever feasible, development should include decentralised energy production or connection to an existing Combined Heat and Power or Community Heating System.

4. Development should provide for and enable, commercial, community and domestic scale renewable energy generation schemes. Development of large scale renewable energy schemes will be considered in all suitable locations.

5. Development should be directed to locations with the least impact on flooding or water resources. Where development is proposed in flood risk areas, mitigation measures must be put in place to reduce the effects of flood water. Both greenfield and brownfield sites should be assessed for their contribution to overall flood risk, taking into account climate change. All development should aim to limit surface water run-off by attenuation within the site as a means to reduce overall flood risk and protect the quality of the receiving watercourse by giving priority to the use of sustainable drainage techniques in developments.

1. Changes to the Building Regulations in respect of carbon dioxide emissions, which came into force in October 2010, are in line with the carbon reduction element of Code for Sustainable Homes Level 3.
6. Development should ensure a shift to the use of sustainable low emission transport to minimise the impact of vehicle emissions on air quality, particularly in Air Quality Management Areas. Development will be located where it is accessible by sustainable transport to support the use of public transport, walking and cycling as an alternative to the car. Higher density development will be located in areas with easy access to local facilities to reduce the need to travel.1

7. Green Infrastructure should be used as a way of adapting and mitigating for climate change through the management and enhancement of existing habitats and the creation of new ones to assist with species migration, to provide a source of locally grown food through local allotments, to provide sustainable transport routes, to provide shade and counteract the urban heat island and for flood mitigation strategies.

8. Existing development should wherever possible be adapted to climate change and help contribute to the reduction in carbon emissions by, where appropriate, including the introduction of green roofs, micro-renewable energy, recycling facilities, building efficiency measures and cycle parking.

4.3.19 The principle of wind turbine developments can be controversial but the City Council believes that they can provide valuable additions to securing renewable energy. The Council accepts however, that within an urban area, there are limited options for effective locations of wind turbine technology developments. Some green wedges could be suitable locations but proposals will be tested against CS policy 13 in order to ensure that the function and purpose of green wedges are retained. The Council will seek to find a balance between possible effects on the amenity of local residents whilst providing for a sustainable future.

DESIGNING QUALITY PLACES

4.3.20 Leicester should be a beautiful and vibrant city. High quality design in buildings and places will help achieve this vision. The City has experienced considerable development and change over the past few years and this will continue over the plan period. The management of this change, in terms of its physical impact on the ground, will have a significant influence on the future success and role of the City.

4.3.21 Good design is central to good planning. Planning Policy Statement 1 emphasises the importance of good design, stating that it is a key element in the overall aim of achieving sustainable development. It ensures attractive, usable, thriving and well-liked places where people want to live, work and play. Good design goes beyond the visual appearance of buildings and it considers how buildings relate to each other, the spaces between buildings, and the connections between places. Good design is also about making places that everyone can use easily and safely. Our vision of quality places links in with the concept of Lifetime Neighbourhoods, places that are sustainable, accessible, inclusive, and attractive and which offer a wide range of facilities for people of all ages.2
4.3.22 Well-designed places are places designed for people. Planning Policy Statement 3: Housing states that good design should contribute positively to making places better for people, and that it is fundamental to the development of high quality new housing, which contributes to the creation of sustainable, mixed communities. As a recognised standard for assessing housing design quality, Building for Life will be used to establish design priorities and as a method of collaborating with developers to help improve design quality in Leicester.

4.3.23 Leicester’s long and varied history has created a city full of character. The City Centre’s medieval street pattern still influences the form of development today, whilst the rows of Victorian terraces and factories dominate the inner city areas. Further afield are pre and post war suburbs, and housing estates developed in the latter half of the twentieth century. The City’s character has been influenced by the proximity of water in the form of the river and canal and by its connection to the knitwear and hosiery industry. This rich history has left a legacy of historic buildings and street patterns which varies from place to place in the City, forming areas with their own distinct character and identity. By respecting this we can avoid inappropriate change in the City, yet create a thriving place where people want to live and work.

4.3.24 The Freemen’s Meadow development and Highcross are recent examples of high quality design in the City. These schemes set a benchmark for future design quality in the City through dynamic and challenging design responses.

The following Policy CS3 meets:

- Spatial Objective 7: A high standard of design for new development;
- Spatial Objective 8: To enable people to move around the City; and
- One Leicester priority:- Creating thriving safe communities, Planning for people not cars.

CS POLICY 3. DESIGNING QUALITY PLACES

Good quality design is central to the creation of attractive, successful and sustainable places. We expect high quality, well designed developments that contribute positively to the character and appearance of the local natural and built environment. Development must respond positively to the surroundings, be appropriate to the local setting and context and take into account Leicester’s history and heritage.
To achieve this new development should promote the image of Leicester as an exciting modern city, acknowledging its archaeological, landscape, historic and cultural heritage and the need to improve the quality of life of the City’s residents. The use of design codes, design briefs, masterplans and other design documents will be essential as part of planning applications for proposals at major sites where there are significant design issues. For example, at strategic development locations, in important historical areas and where development is expected to be phased over a number of years. Planning officers will seek to work pro-actively with landowners and developers to help prepare design documents to meet the Council’s spatial objectives and design policies.

New development should achieve the following urban design objectives:

1. Urban Form and Character:\(^1\) & \(^2\)
   - Contribute positively to an area’s character and appearance in terms of scale, height, density, layout, urban form, high quality architecture, massing and materials;
   - Create a sense of identity and legibility by using landmarks and incorporating key views within, into and out of new development;
   - Create buildings and spaces that are fit for purpose yet are innovative, adaptable and flexible to respond to changing social, technological and economic conditions. Consideration should also be given to future management and maintenance; and
   - Integrate car parking so that it is safe and does not dominate the development or have a detrimental impact upon the appearance of the area. Consideration should be given to underground car parking in the City Centre.

2. Connections, Movement and Inclusive Access:
   - Improve access, connectivity and permeability within and through the development site and the wider area, whilst recognising and catering for the need for security and privacy in new development;\(^3\)
   - Encourage walking and cycling by designing layouts that prioritise safe, well connected pedestrian and cycle routes and restrict traffic speed, and
   - Meet the highest standards of accessibility and inclusion, based on inclusive design principles, and the need to create ‘lifetime neighbourhoods’.

3. Public Realm and Open Space:\(^4\)
   - Create high quality public spaces with full consideration given to the relationship between buildings and the spaces between them and to make best use of landscaping, lighting and public art;
   - Be designed to reduce crime and the fear of crime and promote public safety through the day and night by being in accordance with Secured by Design principles; and
   - Promote active frontages onto public spaces, streets and waterways, an uncluttered street scene and a clear distinction between public and private spaces.
4. Protect and where appropriate enhance the historic environment, recognising its value as a place shaping tool and support the sensitive reuse of designated and other heritage assets, particularly (although not exclusively) buildings of note.

5. To ensure high design standards and good place making, all proposals for 10 or more dwellings must demonstrate how they have been designed to meet Building for Life (BfL) standards. We will aim to ensure that those proposals achieve as a minimum, a ‘good’ standard as defined by BfL. A Design Statement for such proposals must include a BfL assessment to demonstrate how each of the criteria have been addressed. Where appropriate, the City Council may undertake their own assessment using an accredited assessor. Where proposals are received and considered to be of a ‘poor’ or ‘average’ standard, as defined by BfL, improvements will be required to raise design quality and achieve a higher standard of design.

4.4 CREATING SUSTAINABLE COMMUNITIES

4.4.1 This section includes Core Strategy Policies 4 - 16. The focus of these policies is the creation of sustainable communities.

STRATEGIC REGENERATION AREA

4.4.2 Leicester is undergoing a period of economic change, restructuring its economy from a declining manufacturing base, towards service and knowledge based jobs. Much of the development activity needed to enable this change will occur within the central area of the City where regeneration is a priority referred to as the Strategic Regeneration Area (SRA). The SRA is identified as a Strategic Location for Housing in CS Policy 1 and Map 1: The Key Diagram. The boundary is shown on the Map of the Strategic Regeneration Area in Appendix 3.

4.4.3 Leicester’s future economic prosperity will depend on making sure the City has the right appeal to a skilled and mobile workforce as an attractive place to live and work. The quality of life, environment, housing, jobs and cultural, leisure and retail offer of the City and the City Centre in particular will play a major part in this. Recent developments such as Highcross and Curve have made substantial improvements, however much of the land within the SRA continues to contribute less actively than it could to the City’s economy.

4.4.4 We propose a mix of uses in the SRA;

- Leisure uses to broaden the City’s offer;
- Housing, both to meet a housing need and to provide a City Centre residential population that will stimulate and sustain an even broader range of retail, leisure, education and cultural services;
- A science and innovation park to allow the City’s Universities to forge links with business;
• Future developments associated with De Montfort University campus;
• A range of small workspaces, studios and offices to support the small firm economy in manufacturing, creative industries and services; and
• Crucially, major new office development, to attract Regional and National office occupiers.

4.4.5 Major housing growth is planned for the SRA (approximately 11,850 new homes) which is 54% of the total planned housing provision. The SRA will therefore make a very important contribution to the City’s future housing delivery targets, particularly the major mixed use regeneration sites referred to in CS Policy 4. Failures in some of the City’s property markets must be addressed for redevelopment of the SRA to be successful. The SRA is fragmented; it needs to be joined back together by creating safer routes and linked residential environments. In the housing market, a more diverse range of housing types should be delivered that will appeal to occupiers of all incomes.

Diagram 7. The Strategic Regeneration Area
4.4.6 The City Centre is able to take advantage of the proximity of the cultural, leisure and retail offer, as well as the availability of public transport. There are opportunities to minimise car parking over the plan period whilst ensuring viability and deliverability in the short term, in order to compete effectively with out of town office locations. It is important to balance Local Transport Plan requirements and City Centre parking need.

4.4.7 In order for the regeneration of the strategic sites within the SRA to come forward successfully, the provision of infrastructure to enable sites to be accessed, as well as to serve the resulting communities, is very important. This infrastructure includes highways and transport, education facilities, health care centres and public realm. A schedule of the key infrastructure to support development in the SRA is included at Appendix 7.

4.4.8 In recent years the residential population within the SRA has grown slowly but steadily, with schemes such as Bede Island being completed. As this population continues to grow it is important that new development is sufficiently integrated with existing neighbourhoods, including improving links to enable the existing population to access the new facilities.

The following Policy CS4 meets:

- Spatial Objective 1: To create thriving, safe communities;
- Spatial Objective 3: To enable Leicester to become a thriving and diverse economy;
- Spatial Objective 5: To reduce inequalities of health between city communities; and
- One Leicester priorities: Creating thriving safe communities, Planning for people not cars.

**CS POLICY 4: STRATEGIC REGENERATION AREA**

The Strategic Regeneration Area will be the focus of major housing development and physical change to provide the impetus for economic, environmental and social investment and provide benefits for existing communities. New development within the Strategic Regeneration Area must be comprehensive and co-ordinated, complementing and building on delivery programmes and Supplementary Planning Documents. Development will promote:

- Prosperity and economic growth where regeneration is the focus for major employment development;
- Liveability, with high quality residential neighbourhoods having access to a range of facilities;
- High quality urban environments that provide mixed uses and spaces;
The potential to live, work, play and enjoy opportunities for leisure and cultural activity;  
Continuing investment in University related projects;  
Improved accessibility to jobs, homes and services and connectivity between areas including the riverside and water corridors, through opportunities for walking, cycling and use of high quality frequent public transport;  
The protection and enhancement of designated and other heritage assets and where the City Council considers appropriate the use of heritage-led regeneration; and  
Protection of existing habitats and enhancement or creation of new areas for wildlife. A comprehensive management and maintenance programme for the canal and riverside will be required, to safeguard the natural environment and increase its ecological value.

The strategy for specific parts of the Strategic Regeneration Area is set out below:1

Major Office Development
At least 50,000 sqm of new grade ‘A’ office development will be provided in the City Centre. The Office Market Review (2012) identified the need to upgrade the office stock, by either redevelopment, or refurbishment of offices capable of meeting occupier requirements for flexible and energy efficient working environments. New offices will need to demonstrate good pedestrian, cycle and vehicle access.

Abbey Meadows
Abbey Meadows is a key area for delivering economic growth in the City, to attract new jobs in science and technology and related knowledge intensive business linking especially with the City’s two Universities, retaining graduates and building a skills and knowledge base for Leicester’s new economy. The canal and riverside location also provides a high quality setting for an expanding residential community. Our strategy is to achieve the regeneration of Abbey Meadows by:

- The development of a Science and Innovation Park to create a centre for research, development and technology based business (Use Class B1b); Innovation Centre Building (Use Class B1a, b and c); Associated Educational Use (D1) and Associated Research Institute (No Use Class), which can demonstrate a need either to be located within the park or to be near the National Space Centre;
- Developing residential communities at Wolsey Island; the former BUSM site at Ross Walk; and Abbey Meadows West that are linked to existing adjacent communities;
- Focusing on the canal and riverside, enhancing their ecology and ensuring connectivity, through pedestrian and cycle links and bridges, between the Science and Innovation Park, Belgrave and Abbey Park; and
- Provision of a vehicular access spine road, public open space and access to education and health care provision.

The Waterside
The Waterside area connects existing communities with the City Centre and the riverside and canal. Our strategy is to develop the Waterside as an attractive, high quality, residential-led, mixed neighbourhood and city leisure attraction, focusing on water, which enhances the riverside, the canal and its ecology, improves connectivity to adjoining areas and reduces the severance effect of the Central Ring Road. We will do this by:
• Encouraging a full mix of housing types;
• Encouraging small scale offices and workspaces and supporting neighbourhood uses where they are on key safe, connecting routes;
• Defining a new local centre to serve the area on the A50;
• Improving vehicle and pedestrian access through and within the area, including improvements to the Sanvey Gate/Highcross Street/Great Central Street junction and assessing the case for provision of the St. Augustine’s/Bath Lane link road and bridge; and
• Seeking to provide access links, education provision, improvements in the provision of public open space (including to Rally Park) and health care facilities.

St. George’s North
St. George’s North lies to the north of Humberstone Road. It has the potential for mixed use regeneration, linking St. Matthew’s estate and the City Centre. The area to the north of Humberstone Road provides opportunities for major leisure facilities in locations that will generate activity on key routes and provide 24 hour surveillance.

St. George’s South
St. George’s South lies to the south of Humberstone Road. It offers the potential for encouraging small scale offices and workspaces where they are on key, safe, connecting routes and mixed City Centre uses, to support, reinforce and complement cultural and leisure attractions and City Centre living. Improvements to the public realm will support this transition.

Improved public open space and access to education and health care provision will be required to support any residential development.

St. John’s
The area of St. John’s presents the opportunity for some mixed use development where this will improve connectivity along key routes between Abbey Park, Waterside, the City Centre, and existing communities. Development should ensure that viable employment uses are protected.
4.4.9 Policies CS1 and CS6 set out the housing requirement for the City and the strategy to manage housing growth. As a strategic development location, Ashton Green will play a vital part in achieving the levels of growth expected in the City. It will be a new community providing up to 3,500 new homes and other facilities and will reach high levels of design and sustainability.

4.4.10 Ashton Green is a greenfield site on the north west edge of Leicester close to the existing communities of Birstall and Thurcaston in Charnwood Borough. 130 hectares of land at Ashton Green has been allocated for development for a number of years and is shown on the Proposals Map 2006. It is now being brought forward to create a Sustainable Urban Extension to the City. Leicester was designated as a New Growth Point area in 2006, which led to a commitment to an increase in housing delivery in the City. It is therefore essential that development now takes place at Ashton Green. To push forward this process, the City Council has commissioned consultants to develop a masterplanning framework and submit a planning application for the development. A project manager and delivery team are working alongside the consultants to progress the site.

4.4.11 The Ashton Green development will need to demonstrate that it achieves a wide range of sustainability criteria, including sustainable travel, the protection of the natural and built heritage, minimising flood risk, providing quality open spaces and promoting energy efficiency and renewable technology. It will also need to provide employment, education and leisure opportunities and other facilities to create a place where people want to live. The development will promote social cohesion and inclusive communities by providing a range of housing types, sizes and tenures, and by achieving inclusive design and “lifetime neighbourhood” objectives.

4.4.12 Initial masterplanning work has indicated that to meet the aspirations of providing up to 3,500 new family homes, employment opportunities, a new school and other facilities it may be necessary to consider potential options to extend the boundary, as shown on the Proposals Map, or make up any shortfall elsewhere in the City. We will therefore be looking for opportunities in the future so that the aspiration of providing the facilities needed to create a good quality environment can be achieved. The options of extending Ashton Green or finding alternative sites will be thoroughly examined prior to consultation on a Site Allocations DPD in the future.
4.4.13 Development at Ashton Green will require a significant investment in infrastructure over the development period to enable the housing growth and employment land opportunities. The City Council as landowner will work closely with potential developer partners, infrastructure funders and adjoining local authorities over the plan period to ensure the necessary infrastructure is in place to serve the development and that development at Ashton Green provides benefits for nearby communities. A schedule of the key infrastructure to support development at Ashton Green is included at Appendix 7.
4.4.14 A Vision Statement for Ashton Green has been developed and is outlined below:

“Ashton Green has a key role to play in shaping Leicester as Britain’s sustainable City as set out in the ‘One Leicester’ 25 year vision.

It will be a thriving and prosperous new community with a mix of employment and housing opportunities and a dynamic heart created by an innovative new school providing a community learning centre integrated with other community, shopping and small business facilities.

Ashton Green will be a distinctive, safe, green and well connected place designed for people rather than cars. It will provide a driving force behind the aspiration of Leicester having the lowest carbon footprint of any major City in Britain”.

The following Policy CS5 meets:

• Spatial Objective 1: To create thriving, safe communities;
• Spatial Objective 3: To enable Leicester to become a thriving and diverse economy;
• Spatial Objective 6: To reduce the impact of development on climate change;
• Spatial Objective 7: A high standard of design for new development;
• Spatial Objective 11: To conserve and protect the City’s natural environment;
• Spatial Objective 12: To ensure access to high quality outdoor sports, children’s play provision and active recreation facilities for all residents; and
• One Leicester priorities: Creating thriving safe communities, Planning for people not cars, reducing our carbon footprint, improving well being and health.

CS POLICY 5. ASHTON GREEN

The City Council will support the development of Ashton Green as an exemplar of sustainable development, to provide up to 3,500 homes and other amenities including local shops, up to 10 hectares of employment land, schools, open space and other community facilities. It will incorporate a wide range of sustainable development principles, will be to a high standard of design and will promote social cohesion and inclusive communities.

It will be a key area for providing low carbon employment development in the City, for companies and businesses seeking to reduce their carbon footprints, and future proof their operations against rising energy costs and climate change.
Ashton Green contains several areas of good quality natural environment. These areas will be protected and enhanced to safeguard habitats and wildlife, to provide leisure opportunities and contribute to the overall sustainability of the development. Green Infrastructure will be an important part of Ashton Green.

Good connectivity with surrounding areas, Beaumont Leys Centre and the City Centre will be important to provide access to shopping, leisure and employment opportunities. Walking, cycling and public transport links in particular will need to be high quality. Highway and transportation infrastructure required to ensure that Ashton Green is sustainable will emerge from the transport assessment which is currently being prepared to accompany the planning application.

The City Council will work with partners, including adjoining local authorities, infrastructure providers and other stakeholders to prepare a robust masterplan, implementation strategy and outline planning application for Ashton Green. These processes will inform and shape the delivery of this high quality sustainable urban extension over the plan period.

SUB REGIONAL HOUSING GROWTH

Sustainable Urban Extensions Outside the City

4.4.15 Leicester’s neighbouring Local Authorities will establish housing targets and strategic housing locations in their Core Strategies. However areas of search have been identified for planned Sustainable Urban Extensions (SUE’s) to the west of Leicester in Blaby and the north of Leicester in Charnwood. There is also a need to provide more employment land to ensure sustainable economic growth of the sub region. Studies have shown that there is a shortage of available employment land in the City. It will be necessary to accommodate strategic employment sites for low carbon, sustainable development where they have good connectivity to the City, to ensure that the employment land and property needs of the sub-region, as well as individual districts, are met.

4.4.16 New housing and employment on this scale next to the City’s boundary will have big implications for City residents in the local area. Whilst the intention is that these SUE’s should be as self-contained as is possible they are still likely to rely in part on Leicester and elsewhere for facilities such as major shops, health and education, generating the potential for new travel demand. Therefore, the City Council will work with partners and local authorities in the master planning of these areas, to make sure that they function effectively with the City. In particular, the Council will participate in joint working arrangements on planning, investment and delivery frameworks to ensure comprehensive low carbon developments. It will also ensure that any associated infrastructure and green infrastructure requirements are planned in a co-ordinated and comprehensive way.

1. Leicester’s Employment Land Study (BE Group 2006) and the Leicester and Leicestershire Housing Market Area Employment Land Study (PACEC 2008).

2. The Growth Infrastructure Assessment for the Leicester and Leicestershire HMA will inform the level of infrastructure needed for major new developments associated with new growth.
4.4.17 Green wedges have long been established in Leicestershire. They are a good strategic tool, helping to shape the direction of built development but also in providing communities with access to open space, sport and recreation needs. The Council will work with its partners to investigate opportunities to extend green wedges as part of the development of sustainable urban extensions to meet the recreation needs of existing and new communities.

4.4.18 The Council will promote development that is designed to reduce the need to travel and the distances travelled and that encourages the use of sustainable modes of transport. This will include high quality bus services to the City Centre and footways and cycle ways connected to and improving existing networks. Sustainable development will be a key objective. Securing a close match between the type and mix of new homes and jobs and through the early delivery of strategic employment sites to reduce out commuting will help achieve this.

HOUSING STRATEGY

Housing Requirements and Supply

4.4.19 Evidence that supported the housing figures in the RSS identifies a need for 25,600 new homes in Leicester between 2006 and 2026. To achieve this target requires 1,280 homes to be built in the City per year from 2006, which is a 50% increase on annual average house building rates of 850 during 2001-06.

4.4.20 A significant proportion of the planned housing requirement has been identified through existing Local Plan allocations and planning permissions. However, there is some uncertainty over the implementation of a number of outstanding planning consents, particularly for City Centre apartment developments, because of the economic downturn. It is therefore likely that landowners/developers may need to reconsider some of these planned developments to provide a wider range and choice of housing to meet identified local demand and needs. The Strategic Housing Land Availability Assessment (SHLAA) for the City provides the necessary evidence base for the Core Strategy and Site Allocations DPD.

4.4.21 Table 1 below indicates the number of homes already provided since 2006, outstanding permissions still remaining to be built, saved Local Plan housing allocations and other potential sites for new residential development identified by the SHLAA to meet the target housing provision. A Housing Trajectory is included in Appendix 4.

Supply on large sites Sub-total: 21,823

Supply on small sites (permissions): 730

**Total Potential Supply**

22,553

*Future supply includes existing planning permissions, dwellings under construction, saved Local Plan housing allocations and other potential capacity on sites of 10+ units.

4.4.22 Within the Strategic Regeneration Area the majority of housing development is planned for three key intervention areas – Abbey Meadows, Waterside and St. George’s North. The City Council is actively pursuing a major delivery programme to bring forward these sites in partnership with Prospect Leicestershire, the Homes and Communities Agency and other key agencies. An additional 4,300 dwellings have been identified in the rest of the SRA, including the City Centre.

Meeting the Need for an Appropriate Mix of New Homes

4.4.23 The quality and type of new homes is just as important as an increased quantity of new housing. In line with the ‘One Leicester’ vision the Core Strategy will seek to address the City’s identified need for a range of housing types and sizes,
especially affordable family housing. Future housing requirements will be informed by the findings of the Strategic Housing Market Assessment (SHMA) and any future updates.1

4.4.24 The SHMA has used the Department of Communities and Local Government’s trend based population projections to provide the following estimates of household types in the City by 2016.

**Table 3: Projected Household Types in 2016**

<table>
<thead>
<tr>
<th>Married couple</th>
<th>Cohabiting couple</th>
<th>Lone parent</th>
<th>Multiperson households</th>
<th>One person households</th>
</tr>
</thead>
<tbody>
<tr>
<td>31%</td>
<td>12%</td>
<td>11%</td>
<td>10%</td>
<td>36%</td>
</tr>
</tbody>
</table>

4.4.25 Applying the general population trend projection to Census household types, the SHMA suggests the profile of future household types requiring market housing in 2016 will comprise:

- 41% families with children;
- 33% single people;
- 20% couples; and
- 6% other multi-person households.

4.4.26 In order to achieve and sustain mixed communities, developers should bring forward proposals for market housing which reflect the above profile of projected household types.

4.4.27 The Council will seek a minimum target of 41% family housing, comprising two, three and four bedroom houses, within the market housing proposed at all large sites. It is acknowledged that sites within the city centre may be more suitable for apartment development but there is scope to provide a range of house types, including at least the target amount of family housing on large sites within the remainder of the Strategic Regeneration Area. More details will be included as part of the Housing Mix and Type SPD.

4.4.28 It is important to note that an increase in single person households does not necessarily mean a demand for more one bedroom flats, with many single person households often looking for at least two bedroom properties. The SHMA evidence points to both a recent over supply of smaller flats in the City and a pattern of overcrowding in some parts of Leicester. It also highlights the issue of under-occupation of larger homes, particularly those bought on the open market. This means that larger houses for both sale and rent, in suitable submarkets, should be a priority to ensure a more balanced housing market. This not only means encouraging a range of housing types and sizes, including larger family houses on all new housing development sites, but also seeking to exercise more control over the conversion of existing houses which are suitable for family accommodation.

4.4.29 Lifetime Homes standards is a nationally recognised set of criteria that are designed to make new dwellings adaptable enough to accommodate a household’s changing lifetime needs and enable them to be lived in and visited by a wide range of people.
4.4.30 All new housing units should be designed to Lifetime Homes standards. In exceptional cases where an applicant considers that full compliance with this aspect of Policy CS6 may not be feasible, this should be clearly demonstrated in their Design and Access Statement, supported by a Financial Appraisal if appropriate.

4.4.31 New purpose built student accommodation will be exempt from the requirement to meet the full set of Lifetime Homes standards – although a high level of inclusive design will still be sought within these developments.

4.4.32 Policy CS8 - Strategy For Existing Neighbourhoods sets out in more detail the Council’s aspirations for each of the residential neighbourhoods throughout the City. This includes further guidance on what types of new housing will be appropriate and where and when and where the loss of existing residential properties will be resisted.

Student Housing

4.4.33 The SHMA illustrates the substantial increase in purpose built student housing in recent years reflecting both university led initiatives and a growing market provision for students. New provision is proving popular with students and is taking some of the pressures of student needs that would otherwise be accommodated by areas of older housing near the universities. Although future growth in student numbers is unlikely to be as significant as the recent past there is a continuing need to plan for additional purpose built student housing of high quality priced at a level to attract students to study in Leicester. The City Council will work closely with the Universities to assess future needs and guidance on appropriate locations. Future student housing to meet such needs will be most sustainable where it is within easy walking distance of the main campus areas, is of high design quality in line with CS Policy 3, is managed appropriately so as to provide specifically for students and can be well integrated with local built form and existing communities. Planning conditions will be applied to limit occupancy of purpose built accommodation to students. The City Council will consider broad guidance on general locations, appropriate design and management standards for student housing in consultation with the Universities through the preparation of a Supplementary Planning Document.

The following Policy CS6 meets:

- Spatial Objective 2: To meet the needs of diverse communities; and
- One Leicester priorities: Creating thriving safe communities, improving well being and health.
CS POLICY 6. HOUSING STRATEGY

The housing requirements of the Regional Spatial Strategy1 can be met through:

• Residential development in the strategic locations outlined in CS Policy 1;
• Other non-strategic sites to be identified in the Site Allocations DPD;
• Limited housing growth within established residential areas and small housing infill and conversion schemes to support the development of sustainable communities; and
• Small scale employment sites that are no longer appropriate for employment use.2

Detailed housing issues will be considered separately within a Supplementary Planning Document (SPD).

We propose the following measures to ensure that new housing meets the needs of City residents:

• New housing should be provided in accordance with the sustainable development and design principles set out in CS Policies 2 and 3 in order to protect residential amenity and provide quality development;
• The City Council will continue to work with its partners to ensure the delivery of sustainable communities to meet both current and future needs of the population as identified by the Strategic Housing Market Assessment;
• New housing developments will be required to provide an appropriate mix of housing types, sizes and tenures to meet the needs of existing and future households in the City, in particular, larger family housing (at least 4+ bedrooms) as identified by the SHMA. The City Council will seek to take advantage of any government funding programmes and initiatives (e.g. the review of the Housing Revenue Account) which support local authority house building;
• In negotiations with developers the City Council will seek to meet the needs of specific groups through:
  » Provision of Extra Care accommodation to meet identified needs of an increasing elderly population;
  » Provision of supported housing to meet other identified special needs; and
  » Ensuring that an appropriate proportion of new housing units are designed to meet wheelchair access standards.
• Ensuring that all new housing units are, where feasible, designed to ‘Lifetime Homes’ standards so that they are adaptable enough to match lifetime’s changing needs; and
• The City Council will work in consultation with the Universities to assess the needs for student housing, to identify appropriate locations and to devise appropriate design and management standards. Proposals for purpose built student housing will normally be accepted if they meet identified needs, are well designed and managed and can be well integrated with local built form and existing communities within walking distance of the main campuses.
Careful consideration will be given to conversions and to further subdivision of existing flats to ensure there is no adverse impact on the character of the area or the maintenance of mixed communities. In particular, the conversion of existing large houses will be resisted where it would still be appropriate for family use and meet an identified demand for this type of accommodation. Specific considerations will be property size and location, including the amount of private amenity space and parking provision; and within Conservation Areas the impact of flat conversions on the special character of the area, as identified in Character Statements, will be a material consideration.

Detailed housing issues will be considered separately within a Supplementary Planning Document (SPD).

AFFORDABLE HOUSING

4.4.34 The One Leicester Sustainable Community Strategy aims to provide a real choice of housing for everyone, with an increased supply of affordable homes. Affordable housing need in Leicester is currently very high. The Leicester and Leicestershire Strategic Housing Market Assessment (SHMA) 2008 has identified that there is a shortfall in the City of some 790 affordable units a year for the next 7 years. To meet this need through developer contributions alone would require 55% of all new housing to be affordable. However the SHMA recognises that this is not practical. The Council will therefore continue to work with Registered Social Landlords (RSLs) to maximise opportunities for increased numbers of affordable housing units outside of the Section 106 system.

4.4.35 Consultation on the Core Strategy has highlighted the issue of viability as being key, with respondents being unanimous in wanting challenging yet realistic and achievable affordable housing targets, which are based on an informed assessment of economic viability and take account of the varying degrees of viability in different parts of the City.

4.4.36 The Council has therefore undertaken an Affordable Housing Viability Assessment (AHVA) with Housing Market Area partners, which builds on the contents of the SHMA and Infrastructure Assessment and balances the high level of need with the realities of what is economically viable. This has identified a significant variation in viability across the City making the use of a single affordable housing requirement impractical.

4.4.37 The Council has therefore set different affordable housing requirements in Policy CS7, reflecting the evidence of varying degrees of viability.

4.4.38 The affordable housing threshold and required percentage contributions reflect a consideration of:

i) The economic viability of providing affordable housing within the local area and the need to maintain housing delivery in a changing economic climate;
ii) The need for balanced communities, including the mix of units necessary to meet local needs;

iii) Infrastructure requirements and the availability of funding from other sources, both towards infrastructure and affordable housing; and

iv) The particular high costs of redevelopment within the Strategic Regeneration Area.

4.4.39 The overall affordable housing target for the City for 2006-2026 is 4,065 dwellings. Taking into account completions between 2006 and 2009 this amounts to 3,474 dwellings between 2009 and 2026 – an average of 204 dwellings per year.

4.4.40 The target represents the minimum number of additional affordable dwellings that the Council expects to be provided. It has been devised having regard to viability considerations and is therefore lower than the overall need identified within the City.

4.4.41 It is expected that this target will be met largely through S106 developer contributions. However the Council acknowledges the important contribution that Council and RSL-led schemes, purchase of existing stock and other sources will also make to meeting the overall affordable housing need and the opportunity they provide for the City to achieve levels of affordable housing provision well above the minimum target levels identified above.

4.4.42 The Council will continue to monitor affordable housing completions and progress towards achieving the target. If it appears that the number of affordable units being secured through the planning system is not to the levels predicted then the Council will give strong consideration to lowering the affordable housing threshold when the Core Strategy is reviewed.

4.4.43 Similarly, the Council will continue to monitor market conditions; if they change significantly from those tested in the AHVA it will lead to a review of the percentage targets in the policy and the overall affordable housing target for the City. This too will be taken forward as part of the review of the Core Strategy.

4.4.44 The requirement to provide affordable housing applies to all types of development involving self-contained C3 dwellings (including mixed use developments and conversions).

4.4.45 The Council will initially expect the required level of affordable housing to be delivered without public subsidy and provided on site. If a developer claims that it would be unviable to provide the required amount of affordable housing then the onus will be on them to prove this through the use of an appropriate viability assessment. The Council will expect developers to seek grant aid. In these circumstances we will assist the developer in attracting additional funding (for instance through RSL’s and the HCA) to achieve the level of affordable housing required.

4.4.46 The Council will generally secure provision of affordable housing through a Section 106 agreement.
4.4.47 Further guidance on the detailed application of this policy will be found in an Affordable Housing Supplementary Planning Document. This will include more information on when equivalent off-site in lieu contributions will be considered and how these will be calculated.

The following Policy CS7 meets:

- Spatial Objective 2: To meet the needs of diverse communities;
- Spatial Objective 3: To enable Leicester to become a thriving and diverse economy; and
- One Leicester priorities: Creating thriving safe communities, improving well being and health.

CS POLICY 7. AFFORDABLE HOUSING

New residential development should contribute to the creation and enhancement of sustainable mixed communities through the provision of affordable housing.

On all sites of 15 dwellings or more or 0.5 ha or over, the Council will require the following percentages of the total number of dwellings proposed to be affordable, to meet local needs:

- 15% in the Strategic Regeneration Area;
- 30% in the South East of the City and Ashton Green;
- 20% elsewhere in the City.

The Council will expect these requirements to be met and any proposal below the percentages indicated will need to be fully justified through clear evidence set out in a viability assessment, and will need to demonstrate that grant funding sources have been fully explored.

The type and mix of affordable housing sought will reflect the findings of the Strategic Housing Market Assessment.

Developers should not circumvent this policy by artificially subdividing sites, and are expected to make efficient use of land. If a site comes forward as two or more separate development schemes, of which one or more falls below the appropriate threshold, the Council will seek an appropriate level of affordable housing on each part to match in total the provision that would have been required on the site as a whole.

Affordable housing should be provided on site and only in exceptional circumstances will contributions to make an equivalent provision elsewhere be acceptable.

Affordable housing should be available to those in housing need in perpetuity.

---

1. The preparation of the SPD will begin in Autumn 2009 and will be consulted upon in parallel with submission and examination of the Core Strategy. It is expected that it will then be adopted shortly after the adoption of the Core Strategy.

2. The boundaries of the Strategic Regeneration Area and the South East of the City are shown on maps in Appendix 3.
STRATEGY FOR EXISTING NEIGHBOURHOODS

4.4.48 Leicester consists of many neighbourhoods, all with their own individual characteristics, which come together to create a city of rich diversity. These neighbourhoods vary considerably in form from areas of high density Victorian terraces in inner areas to 1960’s council estates near the City boundaries to large high value homes particularly in the south east of the City. Levels of deprivation, ethnicity and the age of residents all differ considerably between neighbourhoods in the City, as do the facilities available to residents locally.

4.4.49 It is the Government’s aim to create sustainable, inclusive, mixed communities in all areas. This means meeting the diverse needs of all people in existing and future communities, promoting personal well-being, social cohesion and inclusion and creating equal opportunity for all citizens. PPS3 describes the key characteristics of a mixed community as being a variety of housing, particularly in terms of tenure and price and a mix of different households such as families with children, single person households and older people.

4.4.50 New housing development within existing residential neighbourhoods will make up a significant proportion of the City’s housing requirements. This provides an opportunity to encourage more mixed communities within those neighbourhoods which currently have a predominance of particular types and tenure of housing. It also provides a challenge to ensure that new developments are fully integrated into our existing neighbourhoods and do not adversely affect their local distinctiveness and historic character.

4.4.51 The Council and its partner organisations have a range of strategies and programmes in place dealing with issues within our neighbourhoods which all contribute to the priorities of the “One Leicester” Strategy. We have drawn on these strategies and programmes to develop this policy. This includes the New Deal for Communities (NDC) project in Braunstone, which has been running since 1999 and has delivered significant investment and improvement in that particular neighbourhood. The Council will continue to work with the NDC’s successor organisation, the Braunstone Foundation, on developing its 2020 Vision for the area and implementing its Spatial Development Strategy. The Council has also developed a series of Integrated Service Hubs that provide integrated, accessible neighbourhood services for children and young people up to the age of 19.

4.4.52 Due to the compact urban nature of the City, there are few distinct settlements and so the composition of different neighbourhoods in Leicester is complex. For the purposes of the Core Strategy we have divided the City into three categories: Inner Areas, Outer Estate Areas and Suburbs. There are existing communities in the Strategic Regeneration Area, which includes the City Centre and these are referred to in CS Policies 4 and 12. Ashton Green, which has no existing neighbourhood, is subject to CS Policy 5.

Inner Areas
4.4.53 The Inner Areas are mainly Victorian terraced private housing stretching outwards from the edges of the City Centre and including the neighbourhoods of Westcotes, Clarendon Park, Spinney Hills, Belgrave and Highfields. It also includes the predominantly Council built neighbourhoods of St. Matthew’s, St. Marks and St. Peters.

Diagram 9. Existing Neighbourhoods

Outer Estate Areas

4.4.54 The Outer Estate Areas consist of large scale housing areas, mainly built by the Council in the 20th century, predominantly on or near the edges of the City. These include the neighbourhoods of Braunstone, Saffron, New Parks, Tailby and Rowlatts Hill, Beaumont Leys, Abbey Rise and Stocking Farm, Eyres Monsell, Netherhall and Thurnby Lodge.
Suburbs

4.4.55 The Suburbs containing predominantly larger private houses with gardens, include the neighbourhoods of Evington, Knighton, Western Park, Hamilton, Rushey Mead and parts of Stoneygate and Aylestone.

The following Policy CS8 meets:

- Spatial Objective 1: To create thriving, safe communities;
- Spatial Objective 2: To meet the needs of diverse communities;
- Spatial Objective 5: To reduce inequalities of health between city and communities;
- Spatial Objective 8: To enable people to move around the City;
- Spatial Objective 12: To ensure access to high quality outdoor sports, children's play provision and active recreation facilities for all residents; and
- One Leicester priorities: Creating thriving safe communities, planning for people not cars, improving well being and health.

CS POLICY 8. EXISTING NEIGHBOURHOODS

The Council will work closely with a range of partners including health agencies, education providers, the police, housing associations, community groups and private developers to ensure that each neighbourhood will have access to a local centre, public open space, play facilities, public transport, sport and active recreation facilities and other community and leisure facilities. We want our neighbourhoods to be sustainable places that people choose to live and work in and where everyday facilities are available to local people. To achieve this the following will apply:

- All new housing development should be in accordance with Policy CS6 - Housing Strategy;
- Existing district and local centres will be supported as the most sustainable and accessible way to provide local shopping facilities to meet people's everyday needs;
- The provision of new community facilities will be supported where they meet the identified needs of local communities and have a viable long term management and funding proposal. Where there are increased demands on existing facilities as a result of development, the enhancement of facilities or suitable additional provision will be sought;
- Where there is a loss of an existing facility suitable mitigation or alternative provision will be sought;
- The City Council supports the enhancement of the higher education establishments and Universities as an integral part of city neighbourhoods;

1. See Policy CS11: Retail Hierarchy.
• The City Council wants to create neighbourhood groups of schools and will ensure that the Local Development Framework supports School Organisation and Implementation Plans, the Building Schools for the Future programme and the Integrated Services Hubs model, which will help support the drive for school improvement and attainment. Due to the densely populated urban nature of the City, with the exception of schools serving new housing development, new schools will be rebuilt on existing sites;
• The Council will seek to retain existing places of worship in order to ensure provision for the wide variety of religious groups active in the City. In considering proposals for new places of worship the Council will take account of the demand for it within the local neighbourhood, the scale of activities for which it is likely to be used and the nature of the area around it. They will be acceptable in principle in lower quality employment areas.1
• Through programmes like the City Warden scheme, the Council will work with its partners, particularly the police, to deal with issues such as vandalism, litter and graffiti to create safe and accessible environments where crime and disorder or fear of crime do not undermine quality of life or community cohesion;
• The Council will support and work with NHS organisations to enable the development of health facilities in new development areas and elsewhere where they are needed and with primary care providers to ensure an equitable distribution of primary care facilities across the City;2
• The Council recognises the importance of allotments across the City and supports the continuing use of existing publicly owned allotment sites where they meet the need of local neighbourhoods;
• The Council will seek to maintain existing green space and parks, and identify new opportunities for their creation and use by local communities whilst contributing to the green network of sites across the City; and
• Access to school sports facilities for organised and planned community use, outside school hours will also be encouraged to foster community sport links and provide out of school opportunities. The Council will also seek to maximise opportunities to counter the current uneven distribution of play areas across the City.3

Inner Areas
Provision is made for approximately 2,000 dwellings in the Inner Areas, which is just under 37% of all non-strategic location housing growth.

New housing provision within the Inner Areas will mainly be on small scale industrial sites that are no longer appropriate for industrial use.

Within the Inner Areas, it is the Council’s priority to retain good quality existing housing for which there is a demand. In particular in Spinney Hills, Belgrave and other neighbourhoods where there is an identified demand, larger houses appropriate for family use should be retained, and conversion to other types of accommodation resisted.4
In areas of high architectural quality or significant local distinctiveness (particularly Conservation Areas), the Council will seek to ensure that the distinctive characteristics of existing properties are retained and that any new development is sympathetic to its specific location.

New hostels and Houses in Multiple Occupation requiring planning permission will not be permitted where they would result in a local over concentration.

Residents Parking Schemes will be considered within the Inner Areas where local residents deem such measures necessary to address the issue of on-street parking.

Belgrave District Centre will be promoted as a national shopping destination for Asian goods shopping and for cultural events. In centres that have developed an evening economy based on food and drink related uses, such as Belgrave, Braunstone Gate, Evington Road and Queens Road, support will be balanced against the need to maintain residential amenity and the capacity of the centre to serve everyday needs.

The Council recognises the particularly important role that public open space plays in improving local health and wellbeing within inner areas in view of the lack of significant garden space within many houses. The Council will ensure that residential areas have good access to allotments and will protect the private allotment area to meet demand in Clarendon Park.

The Council will improve access to wildlife for residents of the Inner Areas by encouraging the creation of pocket parks and their management by local communities. Creating a series of “stepping stones” will also enhance the connectivity between sites through which wildlife can migrate across the City.

The Council will seek to address the lack of access to good quality outdoor and children’s play provision in areas of play deprivation.

**Outer Estate Areas**

Provision is made for approximately 1,100 dwellings in the Outer Estate Areas which is just under 21% of the non-strategic locations housing growth.

Limited residential infilling in Outer Estate Areas can play an important role in the provision of new housing in the City, particularly on lower density estates where more opportunities exist. Within Braunstone, Saffron, New Parks, Beaumont Leys and Eyres Monsell the Council will consider opportunities for new housing types to be developed that complement the existing dwellings and which create a better choice and mix of housing and a more balanced community.

Beaumont Leys Centre will be a focus for town centre uses to serve the north and west of the City. The Council has identified improvement in the quality of the local shopping provision at Eyres Monsell as a priority.
The Council will encourage and support the improvement in accessibility to and between the Outer Estate Areas to increase connectivity, in particularly access to jobs and services.

The Council will seek opportunities to improve the quality of existing green space provision and will seek to address the lack of access to good quality outdoor and children’s play provision in areas of play deprivation such as Braunstone, Beaumont Leys, Eyres Monsell, New Parks and Thurncourt.

The Council will continue to work with its partners to tackle the clear links between levels of deprivation in the Outer Estate Areas and both alcohol dependency and obesity, to help improve the health and wealth of residents.

The Council is committed to maximising the role of libraries as focal points for community and personal development, and will work with partners in the fields of health, education and community development to increase local people’s access to a range of complementary services. We will increase partnership working and community engagement to improve literacy levels and motivation to access education, training and employment.¹

Suburbs
Provision is made for approximately 3,350 dwellings in the Suburbs. Around 2,350 of these will be on non-strategic locations, making up just under 43% of the non-strategic housing growth. The other 1,011 will be at the Strategic Location of Hamilton.

The Suburbs are popular places to live for families due to a combination of their environment, house types and size and local facilities including schools. It is the Council’s aim to ensure that these areas continue to thrive and so provide neighbourhoods that people aspire to live in and which are a genuine alternative to out-migration from the City.

Small scale infill sites can play a key role in the provision of new housing. However these should only be developed where damage can be avoided to the very qualities that make living in these neighbourhoods so desirable. Backland development is a significant issue in the suburbs, particularly in areas with larger gardens such as Aylestone, Evington, Knighton and Humberstone. The Council will therefore not permit development that does not respect the scale, location, character, form and function of the local area. Backland development should be compatible with the locality and any neighbourhood buildings and spaces in terms of design, layout, scale and mass. Development on garden land will not be permitted where it will have an unacceptable impact on levels of biodiversity in the neighbourhood.

In areas of high architectural quality or significant local distinctiveness, such as Stoneygate Conservation Area, the Council will seek to ensure that the distinctive characteristics of existing properties are retained and that any new development is sympathetic to its specific location.

¹ Growth Infrastructure Assessment 2009.
On the London Road corridor, new hostels, hotels and Houses in Multiple Occupation will not be permitted where the community is already imbalanced by a concentration of shared housing or where its development would result in such a concentration.

The Council will encourage proposals to increase the diversity of services available at Hamilton District Centre.

Development of new allotments at Hamilton will be supported to address the current under provision.¹

SITE FOR GYPSIES, TRAVELLERS AND TRAVELLING SHOWPEOPLE

4.4.56 An assessment carried out in 2007 identified the number of pitches required to meet the needs of Gypsies and Travellers in Leicester, the Leicestershire Districts and Rutland.

4.4.57 The Accommodation Needs Assessment established a requirement for 24 residential pitches, 10 transit pitches for Gypsies and Travellers and 3 plots for travelling showpeople by 2012 to meet the need arising in the City, in addition to the existing provision. An ongoing increase in pitch provision of 3% compound growth per year for household increase and 1.5% growth per year for Travelling Showpeople is assumed. The identification of sites will be a matter for the Site Allocations and Development Management Policies DPD².

The following Policy CS9 meets:

- Spatial Objective 2: To meet the needs of diverse communities; and
- One Leicester priorities: Planning for people not cars, improving well being and health.

CS POLICY 9. GYPSY AND TRAVELLER AND SHOWPEOPLE ACCOMMODATION

When considering proposals for sites for Gypsies and Travellers and Travelling Show People, regard will be given to the assessment of need and the level of existing provision.

Sites for transit and residential pitches will be identified in the Site Allocations and Development Management Policies DPD² to meet need as set out in the following table:
LEICESTER CITY CORE STRATEGY

In addition to the relevant National guidance, the following considerations will be taken into account in the determination of locations for gypsy and traveller sites and sites for travelling showpeople:

a) There should be safe and convenient vehicular and pedestrian access to the site;
b) The site must be large enough to provide for adequate on site facilities for parking, storage, play and residential amenity dependent on the number of pitches;
c) There should be convenient access to schools, shops and other local facilities, preferably pedestrian, cycle or by public transport;
d) The site should be able to be landscaped and screened to provide privacy for occupiers and maintain visual amenity; and
e) It should have no significant detrimental impact upon the residential amenity of adjoining properties or neighbouring land.

EMPLOYMENT OPPORTUNITIES

4.4.58 The Leicester Principal Urban Area is a focus of economic development and regeneration. 70,000 County residents commute daily into the City to work. The City’s continued economic success is therefore a key issue for the whole sub region. The purpose of this policy is to develop a thriving and diverse economy that will provide high quality employment.

4.4.59 Leicester needs to continue to move away from too great an economic dependence on a manufacturing base, particularly in vulnerable sectors such as textiles. The service sector is important but has been under represented, especially the higher paid, well qualified business services. Poor graduate retention has also been an issue. The workforce was becoming characterised by low skill and low wages, with pockets of high unemployment. Leicester has a high proportion of old industrial buildings.

Enterprising Leicester

4.4.60 The aim is to improve the economy and generate wealth through innovation and creativity. The first steps are to produce a climate for innovation and creativity and to provide more employment in higher skill, high wage jobs. The priorities include better graduate retention; improved knowledge transfer
between the universities and business; business support and the development of local innovative and creative talent through the education system. This will enable “high tech” manufacturing to prosper, alongside growing employment in knowledge intensive business services, consumer services and the creative industries.

4.4.61 The City Council is leading a partnership project to deliver innovation workspace at the Science and Innovation Park. The project is scheduled for completion before the end of 2011. It will provide a high quality location for knowledge based businesses, supporting Leicester’s emerging technology and innovation sectors and will act as a catalyst for the development of the wider Science Park.

4.4.62 To foster the Design and Creativity Hubs that are developing in Leicester, the City Council will continue to collaborate with the two Universities and increased networking will be promoted between the existing centres of excellence at De Montfort University’s Innovation Centre, the City Council’s LCB Depot and Phoenix Square (Leicester’s flagship new Digital Media Centre).¹

Space Science

4.4.63 Leicester University has over 30 years of experience in space science research of world renown and jointly co-founded the National Space Centre with the City Council using Millennium project funding. It has recently launched a new space knowledge exchange hub called “G-STEP” (June 2009).²

Sustainable Economic Development

4.4.64 Government and Regional policy requires economic development to contribute towards improving productivity and employment growth in an environmentally sustainable way. It requires a positive planning framework to bring forward sufficient land of a suitable quality in the right locations to meet expected needs for industrial and commercial development, reducing emissions and adapting to climate change.

4.4.65 New allocations and renewal of safeguarded employment areas will provide for a full range of land and buildings for businesses of all sizes and types. Low carbon design and construction and on site renewable energy generation will reduce dependence on fossil fuels. Dependence on car usage will be reduced through aligning jobs with homes and for necessary journeys by investment to encourage greater use of sustainable modes of travel.

Strategic Joint Working

4.4.66 Recent Employment Studies have highlighted the shortage of available land within Leicester and reinforced the need for the City Council to work strategically with adjoining planning authorities, to ensure that the employment land and property needs of the sub-region, as well as individual districts are met.³
4.4.67 Leicester’s Employment Land Study will be updated after 2011 to provide updated guidance on the assessment of “fitness for purpose” i.e. quality of employment land. Employment Land is identified on the Proposals Map 2006. Table 4 summarises the employment land supply for the Plan period, for the main employment use classes (Class B). Table 5 summarises the new employment provision (Class B) for the period to 2026 identified in Policies CS01, CS04 and CS10:

</table>

* The Core Strategy proposes up to 10 ha of additional employment land at Ashton Green (see CS Policies 1, 5 & 10). At least 6 ha have been identified through the masterplanning work and further opportunities for employment provision may emerge.
** There is a total of 6.1 ha of land available for the Science Park. This is likely to provide over 30,000 of B1(b) floorspace (based on the most recent outline consents).
*** 50,000 sqm of offices includes over 9,000 sqm completed at Colton Square and the remainder elsewhere in the City Centre.

4.4.68 No other sites have been identified at this stage and the City Council is not expecting to be able to find more than a total of 5 ha of other new land within small sites elsewhere in the City during the Site Allocation and Development Management Policies DPD process.
Other Employment Land

4.4.69 Whilst very little land is available in the City, the existing stock of both land and buildings which are fit for purpose will continue to be strongly protected and where possible enhanced, for reuse for employment, including relocations from the Strategic Regeneration Area. Policy CS10 allows for some non employment uses on lower quality employment land. In addition, Warehouse Clubs that can demonstrate a need to locate within higher quality employment areas will be considered on an individual basis, on the merit of their application.

Offices

4.4.70 The City’s office market had stagnated, due to an oversupply of outdated 1970’s offices around the north eastern part of the ring road, with low rental values. In the past, supply had mainly been met through refurbishment, but these older buildings are becoming increasingly obsolete and there are now comparatively high vacancy rates. In comparison to other cities such as Nottingham and Sheffield, Leicester also has low levels of both existing and proposed grade A office stock and pipeline supply.

4.4.71 The City’s professional office space has traditionally been located around the New Walk area, up to the Cathedral, but these buildings in the historic areas of the City do not provide opportunities for the larger floor plates that are in demand by the modern occupier. There is demand for both residential and D1 uses in this area. There is direct competition between city sites and the long term supply at out of town sites such as Carlton Park and Grove Park.

4.4.72 New offices will need to provide for a range of business sizes from small scale schemes to high profile buildings. They will need to be designed for the future to accommodate rising temperatures and energy prices and located in City Centre locations within easy access to the City’s cycle path network, park and ride routes and wider public transport services as well as retail and leisure uses.

4.4.73 The delivery of a successful City Centre office market is very important to Leicester’s future.

4.4.74 The City Centre is able to take advantage of the availability of public transport so there are opportunities to minimise car parking over the full plan period whilst ensuring viability and deliverability in the short term. This combined with the draw of an attractive place to work and the retail and leisure opportunities that the City Centre offers, will enable Leicester to compete effectively with out of town office locations.

2. Evidenced by planning applications and pre-application enquiries 2005-2009.
The following Policy CS10 meets:

- Spatial Objective 3: To enable Leicester to become a thriving and diverse economy;
- Spatial Objective 4: To raise the standards of educational attainment, skills and training in Leicester; and
- One Leicester priorities: investing in skills and enterprise.
CS POLICY 10. EMPLOYMENT OPPORTUNITIES

The City Council will work with partners to ensure that Leicester has a thriving and diverse business community that attracts jobs and investment to the City. The City Council will also take the following actions:

**Offices**
- At least 50,000 sqm of new grade ‘A’ office development will be provided in the City Centre. The Office Market Review (2012) identified the need to upgrade the office stock, by either redevelopment, or refurbishment of offices capable of meeting occupier requirements for flexible and energy efficient working environments. New offices will need to demonstrate good pedestrian, cycle and vehicle access.
- The Council will promote small offices between 100 and 1,000 sqm in the City Centre on safe, key connecting routes at Waterside and St. George’s to the south of Humberstone Road.
- Small offices will be allowed between 100 and 1,000 sqm outside the City Centre in local and District Centres, or where they extend existing offices or where they are part of a mixed use scheme, including a Business Centre (B1(a) at Ashton Green, as part of the village Centre.

**Professional Office Area**
- Within the existing professional office area between New Walk and the Cathedral, small Class B1(a) offices between 100 and 1,000 sqm and Class D1 uses (except places of worship) will be acceptable. D1 uses should not adversely affect residential amenity. The change to residential use including live work units, will be acceptable in principle, where premises are unsuitable for modern office uses. Proposals should promote the conservation, enhancement and sensitive use of Listed Buildings and Conservation Areas.

**Science and Innovation Park**
- Land will be retained within the Abbey Meadows Science and Innovation Park for research, development and technology based business (Use Class B1b), Innovation Centre Building (Use Class B1 a, b and c); Associated Educational uses (D1) and Associated Research Institutes (No Use Class) which can demonstrate a need either to be located within the park or to be near the National Space Centre.

**Enterprising Leicester**
- The City Council will foster the Design, Creativity and Space Science Hubs that are developing in Leicester and encourage networking opportunities between existing companies and with both Universities.
General Employment Land

- Employment land shown on the Proposals Map will be retained for B1(c), B2 and B8 uses. The Site Allocations and Development Management Policies DPD\(^1\) will identify land to be released from employment use.\(^2\) In lower quality employment areas, as defined by the existing Employment Land SPD (2007) and then the revised Employment Land Study, day nurseries, places of worship, car show rooms and other uses that do not have a use class but are commonly found in industrial estates will be acceptable in principle.

Business Parks

- Within Business Parks, high quality B1(c) and B2 uses will be acceptable. A high level of design and landscaping will be expected.

Ashton Green

- The City Council will allocate up to 10 ha of new employment land within the proposed urban housing extension at Ashton Green, (B1(c), B2 and B8) development, with provision for a Business Centre (B1(a)), as part of the Village Centre.

Strategic Employment Sites Outside the City

- The City Council will support the early delivery of strategic employment sites for low carbon, sustainable development beyond the City boundary which provide good connectivity with the City through access by walking, cycling and use of high quality public transport. It will work with neighbouring local authorities and Prospect Leicestershire to address the provision of employment sites across the PUA.

Relocations

- The City Council will work with partners, to support businesses to relocate from the Strategic Regeneration Area into appropriate property where it enables regeneration.

General Economic Growth

- The City Council will require the developers of major planning applications to provide site specific employment and skills plans to enable local people to secure employment and training opportunities; and
- The City Council will support local business to reduce their carbon footprint by bringing together business concerned with improving their environmental performance.
4.4.75 As part of Planning Policy Statement 4 Local Planning Authorities should set flexible policies for their centres which are able to respond to changing economic circumstances. Central to this is the requirement to create a balanced network of centres and to define a retail hierarchy so that there is an even distribution of town centre uses and that people’s everyday needs are met at the local level.

Diagram 11. Retail Hierarchy
4.4.76 The Retail Planning Study 2007 and Retail Centre Health Checks confirmed the main principles for Leicester’s retail hierarchy as follows:

- Leicester City Centre is the focus of activity and is able to offer a good diversity of non-retail uses that complement the retail function. It provides an excellent retail offer and fulfils its role as a regional shopping destination;
- Beaumont Leys Town Centre is a relatively vital and viable centre, which performs well in its Town Centre role;
- Five centres function as viable district centres. Non-retail uses serving the local community play a valuable role in providing a range of facilities in these larger centres; and
- 67 centres function as local centres, providing convenience shopping close to where people live. These are listed in Appendix 5.

4.4.77 The City Centre is the location for town centre uses to serve the new housing in the Strategic Regeneration Area. Beaumont Leys Town Centre will serve the new development at Ashton Green. New local centres will be provided to serve new communities in Ashton Green, Hamilton, Waterside and Abbey Meadows. The need to identify new local centres to serve existing neighbourhoods will be considered during the preparation of the Site Allocations and Development Management Policies DPD.

4.4.78 The Retail Study identified a need for an additional large format foodstore to serve the western sector of the City, to address the identified imbalances of trade within the City. The area of search for the food store is shown in Diagram 11. The City Council will apply the sequential approach in searching for a site and will consider this in more detail in the Site Allocations and Development Management Policies DPD.

4.4.79 Public consultation highlighted the value that City residents place on their local centres. Most centres are surrounded by and include residential properties. Although food and drink related uses (restaurants, bars and take-aways) can add vitality and make centres more viable, when clustered together they may harm residential amenity or reduce the capacity of the centre to serve everyday needs by creating daytime voids within the centre. The Council has produced guidance on the acceptable proportion of these uses within centres.

The following Policy CS11 meets:

- Spatial Objective 1: To create thriving, safe communities;
- Spatial Objective 9: To develop a strong and vibrant City Centre; and
- One Leicester priorities: Creating thriving safe communities, Planning for people not cars, improving well being and health.
CS POLICY 11. RETAIL HIERARCHY

The Council will support the following hierarchy of retail centres in Leicester:

City Centre
To ensure that Leicester City Centre continues to be a sub regional centre as identified in the RSS the majority of town centre uses will be directed to it. The Central Shopping Core will be the focus for new retail development.

Town Centre
Beaumont Leys
This Centre is the location for town centre uses to serve the north west sector of the City and the PUA, including Ashton Green.

District Centres
Hamilton, Belgrave Road, Evington Road, Narborough Road, Uppingham Road (East).
District centres provide a range of facilities and are accessible by public transport.

Local Centres
The local centres in Leicester are listed in Appendix 5. New local centres will be provided in Ashton Green, Waterside, Abbey Meadows and North Hamilton. Local centres provide convenience shopping close to where people live.

The Council will work with partners to protect and enhance retail centres as the most sustainable location for retail development by the following measures:

a) Applying a sequential approach to the location of town centre uses;

b) Safeguarding the retail character and function of centres by resisting development that would detract from their vitality and viability;

c) Applying a sequential approach to new retail development and ensuring that it is consistent in scale with the size and character of the centre and its role in the hierarchy; and

d) Food and drink facilities (Classes A3/A4/A5) will continue to be supported in centres to meet demand and to add vitality and diversity. However this will be subject to considerations of residential amenity, the effect on the retail function of the centre and the cumulative impact of these uses.

LEICESTER CITY CENTRE

4.4.80 The City Centre is defined as the Central Shopping Core plus the edge of centre. It has benefitted from major new investment that will assist in enabling Leicester to weather the current economic downturn. There is the new Highcross Shopping Centre and the Cultural Quarter is home to Curve, the City’s new performing arts centre and Phoenix Square, the new Digital Media Centre. De Montfort University is located within the City Centre and has made considerable investment in new
buildings and public realm improvements in and around the campus. Further planned investment in a range of projects, including a new sports centre and swimming pool will provide local community benefits. These developments are complemented by improvements to the main City Centre thoroughfares.

Diagram 12. City Centre
4.4.81 However public consultation has highlighted the need for more family orientated leisure facilities and activities to attract a wider range of people and make the City Centre feel safer in the evenings. It has also identified the need for better access for disabled and older people. The historic core of the City is cut off from the main activity of the Centre and Leicester’s market needs investment to maintain it as a central feature of the City. Facilities for users of public transport are not adequate to provide a high quality service.

4.4.82 Better integration between City Centre homes and other more traditional City Centre uses is important, to reduce the risk of noise and other disturbance impacting on residential amenity, particularly from the night time economy. There needs to be a mix of housing type and access to education and health facilities for new and existing City Centre residents.

4.4.83 The Retail Study, undertaken before completion of the Highcross Centre or the public realm works, found that the Centre performs well and that the pedestrianised areas provide a pleasant environment for shoppers. However the study found that there would be no need for any additional retail floorspace following completion of the Highcross Centre. Therefore there is no need to extend the current Central Shopping Core. The boundary of the Central Shopping Core is shown in Appendix 3.

4.4.84 The City Council recognises the importance that Leicester’s heritage plays in making the retail experience within the City attractive and varied. From niche shopping in the tightly packed Lanes area, to the retained facades around the Highcross Shopping Centre and the imposing presence of the Lewis Tower over the central shopping core, the City has used its heritage as a placemaking tool, capitalising on it in maintaining existing and encouraging new development. The City is committed to the continuation of this practice to use heritage to maintain and create a sustainable retail environment and economic vitality.

4.4.85 The Council is undertaking a study to investigate ways of connecting the City’s historic core around the Castle and Jewry Wall with other historic and cultural assets such as the Market, Town Hall Square, the Cultural Quarter and New Walk, by increasing activity on key routes through the City Centre. It will identify quieter areas, especially in the vicinity of the cathedral. De Montfort University generates pedestrian activity and has created a market for student accommodation to the west of the City Centre.

The following Policy CS12 meets:

- Spatial Objective 5: To reduce inequalities of health between city communities;
- Spatial Objective 9: To develop a strong and vibrant City Centre; and
- One Leicester priorities: Creating thriving safe communities, Planning for people not cars, investing in our children.
CS POLICY 12. CITY CENTRE

The Council will promote the growth of the City Centre as a sub-regional shopping, leisure, historic and cultural destination, as the most accessible and sustainable location for main town centre uses and in recognition of its central role in the City’s economy and wider regeneration by adopting the following strategy:

1. Maintaining a compact and accessible retail centre by:
   • Safeguarding the Central Shopping Core as the focus of City Centre retail development;
   • Ensuring that new retail development is well integrated and closely linked with the streets of the Central Shopping Core in terms of proximity, continuity of function and ease of access;
   • Ensuring that the principal shopping streets remain predominantly Class A1 retail; and
   • Maintaining and enhancing the market at the heart of the retail Centre.

2. Enriching the retail experience by protecting and where appropriate enhancing the historic environment by encouraging the re-use and improvement of designated and other heritage assets, particularly (although not exclusively) buildings of note, and through the use of heritage-led regeneration within other historic and cultural areas in the retail centre.

3. Creating a hierarchy and network of pedestrian routes and good quality civic spaces to reconnect disparate and disconnected parts of the Centre by linking together the Centre’s key historic and cultural assets, facilities and venues and reducing the severance effect of the Inner Ring Road.

4. Developing an economically prosperous Centre through the location of small offices and creative industries and supporting related uses including new hotels and conference venues.

5. Create a safe and inclusive City Centre by:
   • Supporting family oriented leisure development and cultural facilities that appeal to all sections of Leicester’s population;
   • Having regard to crime and disorder issues through the regulation of pubs, bars and night clubs;
   • Creating a new Youth hub in the City Centre;
   • Providing for a new City Centre library;
   • Encouraging uses that make key night time pedestrian routes as safe and well used as possible;
   • Making the City Centre more attractive to pedestrians, cyclists and public transport passengers; and
   • Achieving high standards of access to and within the City Centre for disabled and older people.
6. Supporting residential development, whether by conversion of redundant buildings or new build, where an acceptable living environment can be maintained or created by:
   • The identification and development of quieter predominantly residential areas or streets, such as around the cathedral, with restraint on uses and opening hours to reduce the risk of noise and other disturbance impacting on residential amenity, particularly from the night time economy; and
   • Enabling facilities such as health centres and schools that would make City Centre living an attractive proposition.

7. Making the City Centre the focus of public transport initiatives:
   • New City Centre bus termini and routing strategy;
   • Improving bus interchange facilities;
   • Contributing towards City Centre Park and Ride bus stop facilities;
   • Continuing our partnership work with the rail industry to improve interchange at the railway station, particularly with infrastructure, information and through ticketing for bus to rail interchange; and
   • Reducing the separation of the railway station from the City Centre.

A QUALITY GREEN ENVIRONMENT

4.4.86 One of the key aims of the Community Strategy is for Leicester “to be a beautiful, vibrant, clean and green city that is a great place to live but that does not create an unacceptable burden on the planet.” The protection of Leicester’s natural assets is an important strand in delivering the priorities associated with this theme.

Local Distinctiveness

4.4.87 Leicester’s green space network consists of a variety of spaces of differing size, quality and function. These spaces range from green wedges, which have a strategic function to other smaller green spaces spread throughout the City. The River Soar and Grand Union Canal flow from the south of the City, through the City Centre regeneration areas, to the north of the City. This river/canal corridor is valuable for both wildlife and recreation as it connects many green spaces along its path. As part of the Strategic River Corridor the River Soar is of regional importance.

Green Wedges

4.4.88 Green wedges are extensive areas of predominantly open and green land. They penetrate towards the City Centre from the edge of the City. In most cases green wedges also extend beyond the City boundary through green wedge allocations in adjoining districts. This gives them a strategic importance as they connect the City to the surrounding Leicestershire countryside. Their value lies as open space for leisure or recreational purposes, as land of ecological significance and as land providing separation between settlements, guiding development form. They
also serve an important visual function. The City Council will work with neighbouring local authorities to review the Green Wedge boundaries during the preparation of the Site Allocations and Development Management Policies DPD.¹

Diagram 13. Key Elements of the Green Network/Green Wedges in and Beyond the City
Green Spaces

4.4.89 Green spaces include parks and formal gardens, natural green spaces that are managed primarily for wildlife (this includes meadows, river flood plain, woodland and copse), to more informal amenity green space in housing estates that provide an opportunity for various informal recreation activities depending on their size, shape, location and topography. The network also includes equipped play provision for children and young people, education land (school playing fields) allotments, sports ground and churchyards and cemeteries. Green spaces also contribute to the overall visual amenity of the area.

4.4.90 Privately owned sport and recreation facilities are just as valuable as publicly owned land in contributing to the viability of the green space network. Their importance is greater in wards where there is a deficiency in publicly accessible green space.

Green Network Issues in Leicester

4.4.91 Evidence shows that purely in terms of overall quantity (hectares) of green space in Leicester, there is more than adequate provision to meet green space, sport and recreation needs in the City. There is a sufficient supply of parks, informal open space, natural green space and allotments but an under supply of outdoor sports space and equipped play facilities. However, provision is not evenly distributed as some areas of the City have access to large parks and natural green spaces, whilst in other areas open space is only noticeable by its absence. There is also unevenness in the quality and accessibility of provision.

4.4.92 The Council’s Green Space Strategy follows on from work completed in the Open Space, Sport and Recreation Study. The Strategy provides a clear framework for practical action to protect and improve green spaces within Leicester over the next ten years and help address the imbalance in provision, quality and access identified in the study. The implementation of the Green Space Strategy will be led by the Council’s Parks and Green Spaces service.

Sub Regional Green Infrastructure

4.4.93 Green Infrastructure is an essential element of the new sustainable urban communities, identified to meet the housing Growth Point target. It consists of networks of multi functional green space which sit within and contribute to the high quality natural and built environment. The 6C’s Strategic Green Infrastructure Project will develop a long term vision and strategic framework for delivery of Green Infrastructure across the Growth Point. Its aim will be to protect, enhance and extend networks of green spaces and natural elements in and around the three Cities, connecting the surrounding towns, villages and countryside. In planning for these new sustainable urban communities, the City Council will work with adjoining Local Authorities and other partners to make sure that the City’s green network connects with the wider Green Infrastructure Framework for the Leicestershire Region.
4.4.94 The green wedge concept is a good strategic tool to help meet the green space, sport and recreation needs of large new communities on and beyond the City’s administrative boundary. The Council will work with its partners to investigate opportunities to extend green wedges as part of the development of Sustainable Urban Extensions.

**Inner City Regeneration Areas**

4.4.95 New communities are also expected in the Strategic Regeneration Area close to the City Centre. Historically, these areas have been non-residential and the provision of green infrastructure was not necessary. The new communities will need access to a variety of green spaces. It will be important to make sure connections and routes through to large green spaces in surrounding areas are made. The River and Canal corridor is of strategic importance. It is valuable for wildlife and recreation activities in itself but also gives access to a number of key green spaces along its route. Securing improvements to this corridor will be important. Regeneration activity should not damage and should enhance the biodiversity that is dependent upon the River Soar and Grand Union Canal.

The following Policy CS13 meets:

- Spatial Objective 11: To conserve and protect the City’s natural environment;
- Spatial Objective 12: To ensure access to high quality outdoor sports, children’s play provision and active recreation facilities for all residents; and
- One Leicester priorities: Planning for people not cars, creating thriving, safe communities, Improving well being and health.

**CS POLICY 13. GREEN NETWORK**

The Council will seek to maintain and enhance the quality of the green network so that residents and visitors have easy access to good quality green space, sport and recreation provision that meets the needs of local people. A Supplementary Planning Document will be prepared to provide detailed guidance and information on green space, sport and recreation provision and to support the following principles:

- The Council will safeguard and improve green space, sport and recreation facilities that are of value to the green network, local communities and biodiversity, especially those that are of strategic importance i.e. green wedges, the River and Canal Corridor;
• Green wedges will be maintained as areas of land that prevent the merging of built up areas of the City and adjoining settlements, guide the development and provide a “green lung” into the inner urban area. Their function as open space for leisure or recreational purposes will be maintained and enhanced. Development within a green wedge will be expected to serve the open space, be of high design quality and of an appropriate scale and size for its location to minimise the visual and environmental impact of the development;¹

• The Council will pursue opportunities to address the imbalances in green space provision by making green space, sport and recreation facilities more accessible and improving links and connections between spaces;

• New development proposals should meet the need for provision arising from the development, taking account of local qualitative and quantitative deficiencies in green space, sport and recreation provision. New on-site provision or S106 contributions to improve the quality of, or access to, existing open space, will be expected and commuted maintenance sums will be sought; and

• Where there are proposals that affect green space, outdoor sport or recreation facilities, land should not be released, either in total or in part, for development unless it is:
  a) Surplus to requirements for its current green space function; and
  b) Not needed for another type of green space use; or
  c) Equivalent or better replacement green space would be provided in the local area.

4.4.96 Planning Policy Guidance Note 17 recognises that not all open spaces are of equal merit and some may be available for other uses.² The Council’s Green Space Strategy indicates that there may be potential to either change the use of a green space or dispose of green space altogether. This should only be in areas where there is an over supply of a type of green space. The green space would be low quality, low value and have little potential for improvement.

4.4.97 Some areas of public open space have suffered from a decline, due partly to a perceived lack of security. This has in turn led to vandalism and real threats to personal safety. In such exceptional cases, partial development which retains public open space as the predominant land use and ensures that it is overlooked can reduce the opportunities for antisocial behaviour and encourage greater use of the remaining space for leisure. Sport England’s assessment criteria will be used to help determine the acceptability of development on playing fields.

4.4.98 In built up areas where there is a shortage of green space and little opportunity to provide new green space the Council will work towards improving access to green space provision through improving access and connections to larger green spaces in the wider green network. It may also be necessary to secure qualitative improvements to improve the overall quality of provision for local residents depending on the availability of green space and its current quality. The Green Space Strategy provides guidance as to the type of improvements needed in different areas of the City.

1. See Policy CS2, para 4 re: renewable energy schemes

Standards

4.4.99 The overall quantitative green space provision standard for Leicester is 2.88 ha per 1,000 population. This includes: Parks and Formal Gardens, Natural Green Space, Informal Green Space, Equipped Children & Young People’s Play Space, Allotments and Outdoor Sports Space. The accessibility standards and quality audits are set out both in the Open Space, Sport and Recreation Study for Leicester City 2007 and Green Space Strategy. These standards will be used to assess whether existing provision is adequate to meet the needs of the extra population created by new development and where appropriate improvements to the quality or accessibility of green space, sport and recreation provision will be sought.

4.4.100 To deliver the objectives of the Core Strategy the Council will focus resources secured from external funding and S.106 contributions for new development to improve the quality of existing facilities and make them more accessible. It will also consider other mechanisms to secure funds for green spaces, for example an annual open spaces maintenance charge, levied on residents (e.g. Hamilton area) and funding available for Green Infrastructure to facilitate development through Growth Point status. The City Council works jointly with partners as part of a strategy to safeguard the natural environment and increase the ecological value of the canal and riverside. Green space needs of new communities will also be considered through the master planning of large residential areas.

TRANSPORT STRATEGY

4.4.101 A sustainable and functional quality transport system is crucial to support the economic social and environmental prosperity of Leicester and the wider sub-region and to meet the objectives of the One Leicester vision of less traffic, people feeling safe and planning for people not cars. Facilities and services need to be accessible not just to the people of Leicester but also to those in both the neighbouring districts and the wider sub region. This transport strategy section of the LDF is primarily guided by the Council’s current Local Transport Plan (LTP).

4.4.102 Good transport underpins economic and social success, particularly of a large urban area. The proposed new housing, employment and other development will generate new transport demands that would increase journeys to, from, around and within Leicester, as people not only commute into the city but travel to jobs and for social needs elsewhere in the sub-region. However there is little surplus transport capacity available on radial and orbital routes into and around the City during peak periods and increases in capacity for general traffic are not feasible. Extra capacity can be achieved by the development of an improved public transport network to serve the changing City, in tandem with a series of demand management measures. This will be backed up by a package of improvements to pedestrian and cycle routes, signing and the public realm across Central Leicestershire.
4.4.103 The longer term transport strategy is based on deliverable and realistic improvements to public transport. It will go hand in hand with the City’s efforts to regenerate its central core and will sit at the heart of our efforts to accommodate both existing and future need to travel in a sustainable way. Our challenge will be to take a co-ordinated approach across all modes of transport, whilst recognising the individual access requirements of specific development proposals. Better use of existing transport infrastructure and the provision of new infrastructure will be required. In some cases this will need to be provided outside of the City boundary, which will require joint working with other districts, Leicestershire County Council and the Highway Agency as the relevant Transport Authorities.

Roads

4.4.104 Extensive road widening is not acceptable due to the high costs, environmental concerns, the need for demolition, severance and climate change concerns. The existing transport capacity is so valuable that existing physical capacity should not be taken out, unless there is an overwhelming transport case otherwise. However relatively small scale improvements to road capacity will be made, particularly to solve localised ‘hot spots’ and to facilitate the provision of bus lanes and junction improvements. Any additional transport capacity requirement will be provided primarily by improvements to public transport and encouragement of cycling and walking.

Buses

4.4.105 Buses are the main form of public transport in Leicester and more sustainable than car travel. New development should support the proposed Quality Public Transport Corridors (QPTC) as defined in the Local Transport Plan and should include routes and opportunities for frequent bus services within easy walking distance of new development. Additional improvements to the transport network will be developed through the 3rd Local Transport Plan including implementation of Quality Public Transport Corridors (QPTC) on all major radial routes and extending the existing QPTCs. This includes an improved Belgrave Road/Loughborough Road QPTC to include Abbey Lane, thereby improving access to development at Abbey Meadows and Ashton Green and providing more opportunities for links between the Charnwood SUE, Birstall Park and Ride site and the City Centre.

4.4.106 Bus facilities within the City Centre are inadequate and regional funding has made provision for a major project involving new bus termini and routing. This scheme is being developed to accommodate the growth in bus travel due to new development in Central Leicestershire and will provide high quality facilities in the best locations to make bus travel much more pleasant and attractive. The development of smart cards and the modernisation of the real time public transport information system will improve passenger experience and increase patronage.

Tram

4.4.107 It is recognised that due to the growth in travel and as buses only have limited appeal to car users, a tram would achieve the significant modal shift away from car use that is required in the longer term. It is the most sustainable form of motorised transport and it would provide increased transport capacity to serve existing development and new growth. Initial work has begun looking at potential routes and to assess the strength of the business case for the delivery and day to day management of a tram system. The City Council will facilitate this work.

Rail

4.4.108 The costs of new rail provision are many times that of bus provision and will not demonstrate good ‘Value for Money’ for either tackling congestion or delivering accessibility and therefore new local rail services will not be pursued for the third LTP, but this will be kept under review in case external circumstances change to make it affordable.

4.4.109 The City Council supports the proposed electrification of the Midland Mainline to provide a more sustainable, more pleasant and quicker service. Other opportunities to improve local train services will be supported including any proposals for additional local stations such as the proposed station in Blaby. It is acknowledged that phase 2 of the National Forest line, from Leicester to Burton-on-Trent, is unlikely to be delivered during the short or medium term, as the opportunity to deliver new rail routes is so limited, but the rail infrastructure needed to deliver this scheme should be protected.

Park and Ride

4.4.110 Leicester has a park and ride at Meynell’s Gorse in Braunstone which was opened in 1997 and a park and ride at Enderby which was opened in November 2009. It is accepted that to deliver both the objectives of the Core Strategy and the Central Leicestershire Local Transport plan additional strategic park and ride sites will need to be delivered, with sites proposed at Birstall and Glenfield. Additional sites for strategic park and ride will be required on the edge of Leicester with the locations of these being determined through future planning and transport documents. New park and ride should be of the highest design quality, use the most sustainable methods of transport, and be located on sites which are appropriately located for demand and cause the least impact to biodiversity and the natural environment.

Freight Movement

4.4.111 The majority of freight movements in Leicester will be undertaken by road. The contribution made by rail and water will always be very limited in Leicester but any opportunities for rail or water based facilities must be carefully explored and implemented where viable. No suitable sites exist within Leicester for strategic rail freight sites which are 50 hectares or larger, but sites are proposed in the north of...
the County near junction 24 of the M1 and near the A50. However opportunities should still be sought for rail freight connections within Leicester especially at the Humberstone Goods Yard which has land safeguarded by Network Rail to allow linkage to the rail network.

The following Policy CS14 meets:

- Spatial Objective 8: To enable people to move around the City; and
- One Leicester priority: Planning for people not cars.

**CS POLICY 14. THE TRANSPORT NETWORK**

Development should be easily accessible to all future users, including those with limited mobility, both from within the City and the wider sub region. It should be accessible by alternative means of travel to the car, promoting sustainable modes of transport such as public transport, cycling and walking and be located to minimise the need to travel.

The Council will work with partners to develop and maintain a Transport Network that will maximise accessibility, manage congestion and air quality, and accommodate the impacts of new development. This will be achieved through:

- New development being designed and located so that it is within close walking distance to frequent high quality bus services;
- Providing park and ride in appropriate major edge of urban developments such as Sustainable Urban Extensions;
- Identifying and safeguarding land for new city centre bus station and interchange facilities and for the Quality Public Transport Corridors;
- Assessing the strength of the business case which could lead to the phased delivery of a tram based system;
- The provision of pedestrian routes, cycle routes and infrastructure to give good access around the City;
- The delivery of highways and transport improvements as guided by the statutory Local Transport Plan and the Leicester and Leicestershire Growth Infrastructure Assessment, through joint working with neighbouring Transport Authorities and districts where necessary; 
  1
- Enabling increased rail use through improvements to the rail station, safeguarding the spare trackbed alongside the Midland Mainline and by not prejudicing the implementation of future rail infrastructure at Knighton Junction; and
- Providing opportunities for sustainable freight movement where possible on rail and waterways by working with Network Rail, British Waterways and other agencies in considering potential low key freight uses and waterside freight connection.

MANAGING DEMAND FOR CAR USE

4.4.112 One of the main contributors to congestion and air pollution in Leicester is commuter traffic on the radial routes during the morning and afternoon peaks. Managing traffic on these radial routes is fundamental in delivery of a sustainable transport network. We will facilitate this by offering a range of transport options to encourage alternatives to car usage.

Car Parking

4.4.113 Through the RSS\(^1\) the three Cities of Leicester, Nottingham and Derby have established a long standing agreement to coordinate parking standards, so as to minimise inappropriately located development across the region. The City Council will be reviewing Leicester’s Parking Strategy in preparation for the third LTP.

4.4.114 The LTP is based on no net increase in off street parking places within the City Centre. It is also based on some of the existing spaces becoming short term (non-commuter spaces). There will also have to be a consideration of the allowance of park and ride spaces that are effectively City Centre parking stock. High quality travel plans will be required for all new development within the City Centre. Any transfer of parking places from one location to another will have to be considered on an individual basis to ensure that the alteration of traffic flows is compatible with the LTP. Within the City Centre the overall public car parking provision on and off street is adequate to meet anticipated demand and therefore additional privately operated car parking, not associated with new development, will only be required where specified by the City Wide Parking Strategy. Temporary car parking on derelict sites will not normally be acceptable as these will sterilise sites, impeding regeneration.

Smarter Choices

4.4.115 “Smarter choices”\(^1\) aims to influence people’s travel behaviour towards more sustainable modes and to increase awareness of the alternatives to car travel and the benefits. The concept of Smarter Choices is to be incorporated into the new SPD for Parking Standards and Travel Plans which is currently being developed. The measures used to establish sustainable lifestyle travel patterns and behaviour include marketing sustainable travel options; informing people of travel choices such as through personalised travel plans; improving travel services; providing new transport services and providing new options such as technological improvements that will reduce the need to travel.

The following Policy CS15 meets:

- Spatial Objective 8: To enable people to move around the City;
- Spatial Objective 6: To reduce the impact of development on climate change; and
- One Leicester priority: To reduce our carbon footprint.
CS POLICY 15. MANAGING DEMAND FOR CAR USE

To meet the key aim of reducing Leicester’s contribution to climate change, opportunities should be provided that will manage congestion on the City roads. This will be achieved by:

- Reviewing Leicester’s Car Parking Strategy to ensure that Leicester City Centre attracts inward investment that reduces the potential to travel by car;
- Preparing a Supplementary Planning Document for Parking Standards and Travel Plans;
- Requiring travel plans for large scale development;
- Supporting a proposed hierarchy of parking enforcement zones;
- No additional new public and contract car parking provision (long stay or short stay; temporary or permanent) not associated with new development will be acceptable in the City Centre unless a need is identified by the City Wide Parking Strategy;
- Ensuring the provision of high quality cycle parking to encourage a modal shift away from the car; and
- Ensuring that parking for residential development is of the highest design quality and use land efficiency does not compromise viability and the need for high quality regeneration. It should be appropriate for the type of dwelling and its location and takes into account the amount of available existing off street and on street car parking and the availability of public transport.

CULTURAL STRATEGY

4.4.116 Diverse, vibrant and creative local culture encourages pride and cohesion in the community and culture is an important factor in the creation of sustainable communities. Sustainable communities are places where people want to live and which enable people to meet their aspirations and potential. The Community Strategy sees culture as essential to the health and well-being of the City and there is an aspiration for Leicester to be a cultural centre of excellence. Leicester is a city of diversity in terms of its people and its places. The cultural offer is an important part of the quality of a place and it helps strengthens the City’s unique character. In particular Leicester has a thriving festival and events programme.1

4.4.117 There has been significant investment in cultural infrastructure in recent years, including the National Space Centre, Braunstone Leisure Centre, Curve and the Digital Media Centre. Smaller neighbourhood based facilities, such as community centres, youth centres and libraries are important in fostering community spirit at the local level and can bring together people from different backgrounds. We will continue to support proposals which will increase the quality and variety of cultural and leisure facilities in the City.2

1. See www.leicester.gov.uk/festivals
4.4.118 Culture can also play a major role in encouraging regeneration, particularly in the vicinity of the river and canal and areas of historic and industrial importance, to form hubs or clusters of creative industry and cultural facilities. It is also important in attracting tourists, visitors and new residents to the City.

4.4.119 The Council has a long tradition of seeking to accommodate Places of Worship to cater for the various religions in the City. Although they should be easily accessible to their respective communities there has been a trend for larger multi-purpose buildings being sought away from residential areas. There is a demand also for a site for a crematorium to cater for the City’s Asian population. The Council will continue to have regard to the needs of all its diverse communities.

The following Policy CS16 meets:

• Spatial Objective 2: To meet the needs of diverse communities; and
• One Leicester priorities: Investing in our children, Planning for people not cars, Creating thriving, safe communities.

CS POLICY 16. CULTURAL STRATEGY

We will work with our partners to develop culture and leisure facilities and opportunities which provide quality and choice and which increase participation among all our diverse communities. We consider that new developments should create an environment for culture and creativity to flourish by:

• Encouraging investment to improve the quality of the infrastructure for arts, sports, museums, parks, play provision, libraries, cemeteries and crematoria and leisure. Facilities should be accessible and fit for purpose, attracting participants from outside Leicester as well as building communities at the neighbourhood level;
• Providing opportunities for the creative economy to prosper by developing creative clusters and appropriate workspaces for the creative sector;
• Creating or retaining cultural facilities and opportunities, including places of worship, cemeteries and crematoria, that help people who live here to develop a sense of belonging, to value the cultural diversity and heritage of our City and become more confident and proud of Leicester, seeing it as a good place to live;
• Developing a rich cultural offer which attracts people to Leicester such as visitors, businesses looking for a new location, students, graduates and people applying for jobs so that they see Leicester as progressive, ambitious, confident and vibrant; and
• Using good place design, activities and events to inspire people to get more active, more often.
4.5  CONSERVING THE ENVIRONMENT

4.5.1 Core Strategy Policies 17 and 18 address the conservation of the natural and historic environment of Leicester. This section includes a statement at paragraph 4.5.18 on Safeguarding Mineral Deposits in the City.

BIODIVERSITY

4.5.2 One of the key aims of the Community Strategy is for Leicester “to be a beautiful, vibrant, clean and green city that is a great place to live but that does not create an unacceptable burden on the planet”. Protecting and strengthening Leicester’s wildlife-rich environment will be important in ensuring that the City’s impact on the global environment is minimised.

Local Distinctiveness

4.5.3 Leicester’s ecology is diverse and interesting. The range of species is comparatively high due to the complexity and diversity of habitats and niches in Leicester - creating a rich mosaic within a relatively small geographic area. Habitats that are beneficial for wildlife in the City include: small areas of woodland and wetland, meadows, pasture, hedgerows and spinney’s, managed green spaces including parks and private gardens, allotments, cemeteries and school grounds. There are also more typical urban habitats, such as buildings and structures, disused railway land, road verges/banks, bare ground and disused or abandoned land.¹ The River Soar and Canal Corridor² is a very important natural feature in the City for wildlife.

4.5.4 As with most cities, biodiversity in Leicester is fragile. It is under threat from many different areas such as habitat loss and fragmentation, but key wildlife corridors in Leicester are well managed and thriving.

Biodiversity Network

4.5.5 Local Nature Reserves, regionally and locally important wildlife corridors and the wildlife sites and habitats that are connected by them, collectively make up Leicester’s “biodiversity network”. Regionally important strategic wildlife corridors are the River Soar and Grand Union Canal, the Rothley Brook, and the Mainline Railway and Ivanhoe Railway. Locally important corridors are mainly centred on Leicester’s Brooks and green wedges (see Diagram 15). Prime wildlife sites that support local and nationally important habitats and species are the designated Local Wildlife Sites (LWS) (formally known as Sites of Importance for Nature Conservation - SINC’s).³

4.5.6 Local Wildlife Sites⁴ provide the cornerstone and focus for sustaining biodiversity. Protecting and managing Local Wildlife Sites alone however will not sustain the biodiversity in Leicester. This is because many of these sites are isolated within areas of low biodiversity. Conservation and improvement of land outside these designated areas is therefore necessary to ensure that the City’s biodiversity is sustained, enhanced and buffered from harm. The biodiversity network can be

strengthened by improvements to open land of little existing wildlife value, but which has an important place in a wildlife corridor or green network. These Biodiversity Enhancement Sites are identified on the Proposals Map. Sites that can be upgraded to meet the criteria for selection as a LWS will also be beneficial for strengthening biodiversity. This is a key priority to maintaining biodiversity within the City. Built or derelict land in important locations for wildlife can also help to provide routes or stepping stones for the migration, dispersal and genetic exchange of species in the wider environment through habitat creation, e.g. networks of ponds, green roofs, reedbeds/natural filters.

Diagram 15. Biodiversity Network

4.5.7 The River Soar and Grand Union Canal Corridor is a major biodiversity asset for the City. It is part of a strategic regional wildlife corridor and links the City with the surrounding countryside by bringing wildlife into the heart of the City.
Protecting this strategic wildlife corridor from adverse development and enhancing it through the Core Strategy is the best way to help biodiversity cope with and adapt to pressures from climate change such as pollution and habitat degradation. This will allow various species to shift naturally to a more favourable climate zone.

The following Policy CS17 meets:

- Spatial Objective 11: To conserve, protect and enhance the City's natural environment; and
- One Leicester priorities: Planning for people not cars.

**CS POLICY 17. BIODIVERSITY**

The Council will expect development to maintain, enhance, and/or strengthen connections for wildlife, by creation of new habitats, both within and beyond the identified biodiversity network. In Leicester’s urban environment private gardens, previously developed land, buildings and built structures can also provide important habitats for wildlife. Such sites that are either connected to the overall biodiversity network or act as wildlife refuges for animals moving out from these sites across the broader network of green spaces in the City will also be assessed for their biodiversity value.

In considering the potential impact of development on wildlife, the Council will require ecological surveys and assessments of the site to be undertaken where appropriate to establish the presence or absence of protected species or habitats of particular value prior to any development taking place. Careful consideration will then be given to the potential to find an alternative location for the development, to avoid harm to wildlife and geological interests. If this is not possible the Council will require adequate mitigation measures to be put in place. Compensation measures to offset significant harm caused by the development may also be necessary e.g. through off-site contributions to sites with good ecological potential or by integrating biodiversity features within new development.

**Delivering Improvements to Biodiversity**

4.5.8 In order to deliver improvements to biodiversity in the City, the Council will continue to work with its long-term partners such as Groundwork Leicester and Leicestershire and other organisations such as: The Wildlife Trust, East Midlands Development Agency and national organisations such as the Environment Agency and Natural England. Groundwork has been fundamental in helping to secure external funding for a wide range of projects to improve and promote biodiversity in Leicester. This partnership also enables local community groups to get involved, which gives people access to wildlife in their local area.
4.5.9 The Council actively works in partnership with conservation organisations to promote biodiversity along the River Corridor through the enhancement or creation of habitats. Two Green Infrastructure projects that the Council is involved in are Abbey Meadows and Castle Hill Country Park. Both projects involve joint working with various organisations and neighbouring authorities. The Abbey Meadows project will enhance the river corridor through the creation of a series of wetland and reed bed areas alongside the regeneration area of Abbey Meadows. This will enhance the biodiversity and amenity value of the site for existing residents and visitors as well as new communities and businesses within the adjacent regeneration area. The Castle Hill Country Park project will provide opportunities to create a series of ponds, reed beds and wetland within Castle Hill Country Park. These are being pursued in partnership with neighbouring authorities and conservation organisations to provide greater amenity and biodiversity in the Park for existing local communities and new development of the Ashton Green SUE.

4.5.10 The Council will seek to secure improvements to natural green spaces in the City. This may involve changing the way in which parts of large green spaces are managed to encourage more natural features and greater benefits for wildlife, delivering priorities in the Green Space Strategy. S.106 contributions will be sought from relevant new development to compliment the larger programme of environmental improvements.

HISTORIC ENVIRONMENT

4.5.11 The historic environment is an important asset for the City. It is a physical record of our history and is central to our heritage and our identity. The historic environment is important as a way of defining an area, as a focal point of civic pride and as a draw for tourism and investment and the creation of jobs. However this environment can be fragile and once gone it cannot be replaced. Therefore careful management is necessary to ensure its importance is recognised and that it can continue to contribute to the success and growth of the City. The City Council is committed to protecting and where opportunities arise, enhancing the historic environment of the City.

4.5.12 New national policy set out in PPS5 has shifted the emphasis from individual designations (scheduled monuments, listed buildings, registered parks and gardens, historic battlefields, conservation areas and locally listed buildings) to a more holistic treatment of the historic environment. This recognises the importance that our heritage plays in people’s quality of life for this and future generations, as well as its contribution in creating sustainable places and as a placemaking tool within existing and new developments. The City Council recognises this change in emphasis and will seek to take a holistic view of designated and other heritage assets within the overall strategy for the City.

4.5.13 The City Council recognises the importance and impact of the historic environment on communities throughout the city. Therefore it is committed to proactively engage members of these communities in the earliest stages of any work which may affect the way they value their historic environment. This includes local heritage groups, religious groups, local community groups, residents and other interested parties.
4.5.14 Leicester has one of the longest and most varied histories of any city in Britain. Its origins lie in an Iron Age settlement on the east bank of the River Soar. The Romans established the settlement as a tribal capital and constructed one of their most important roads, The Fosse Way, through the town. During the medieval period the town was both an administrative and a commercial centre. The late 17th century witnessed the start of the hosiery trade and much of the town came to be dominated by terraces and courts of knitter’s cottages. The first canal came in the 1790’s and the railways in the 1830’s, and the following decades witnessed the arrival of the boot and shoe, engineering, rubber and elastic webbing industries and the wholesale adoption of mechanisation by the hosiery industry, sparking off a rapid expansion of the City. By the start of the 20th century Leicester was still expanding rapidly with knitters’ cottages being replaced by large multi-storeyed factories and with residential suburbs, ranging from terraces of artisan cottages to large middle-class villas being established.
4.5.15 This long and varied history has left Leicester an extensive legacy ranging from the upstanding remains of the Roman Jewry Wall, the Norman castle and the medieval churches, many of which are still in use, through to the factories and suburbs of the Victorian and Edwardian City. In addition to the upstanding structures, which remind us every day of this legacy, there are also buried remains containing much evidence of the City's unique past.

4.5.16 There are 10 Scheduled Monuments, over 400 Nationally Listed structures and 24 locally designated Conservation Areas in Leicester, all of which are afforded statutory protection. 370 locally listed buildings have been designated due to their architectural and historical importance as well as their contribution to the historic character of the City.

4.5.17 The Archaeological Alert Area, shown on Diagram 16, extends over the area of the Roman and medieval defences, Roman and medieval extra-mural suburbs, Roman cemeteries and medieval religious houses and hospitals. It is within this area that development is most likely to have an impact upon buried and low level archaeological remains. It should be noted, however, that early archaeological remains may extend above ground into existing structures and are not confined to the Archaeological Alert Area.

The following Policy CS18 meets:

• Spatial Objective 10: To maintain and enhance Leicester’s Historic heritage; and
• One Leicester priorities: Creating thriving safe communities, Planning for people not cars.

CS POLICY 18. HISTORIC ENVIRONMENT

The Council will protect and seek opportunities to enhance the historic environment including the character and setting of designated and other heritage assets. We will support the sensitive reuse of high quality historic buildings and spaces, promote the integration of heritage assets and new development to create attractive spaces and places, encourage contemporary design rather than pastiche replicas, and seek the retention and re-instatement of historic shop fronts and the protection and where appropriate, enhancement of historic public realm. Within the regeneration areas particular importance will be given to the integration of the historic environment with new development through encouraging heritage-led regeneration.
An archaeological assessment will be required where a proposal would affect a site which is known to contain below ground and low level archaeological remains or thought likely to contain below ground and low level archaeological remains. Where that assessment indicates that there is a potential that significant remains exist on a site an archaeological field evaluation will also be required. In addition to this all major applications within the Archaeological Alert Area will be required to include an assessment of the impact of the proposal upon all archaeological remains. There is a presumption that nationally important remains will be preserved in situ. In the case of less important remains, where it can be demonstrated that it is not possible to preserve remains in situ, provision for the excavation and recording of remains will be essential. In all cases developers must demonstrate a thorough consideration, proportionate to the importance of the remains, of any potential archaeological remains, whether designated or not, prior to submitting a planning application. Where a development is likely to have a significant effect on important archaeological remains, the City Council will work with the developer to reconcile the need for development with the desirability of preserving the information contained within the remains.

The Council will pro-actively engage with local communities to protect and enhance the quality and diversity of Leicester’s historic environment, in particular through the production of Conservation Area Character Appraisals incorporating management strategies, other development plan documents and guidance notes.

The City Council will monitor historic buildings at risk and take action where necessary to secure and improve those buildings deemed at most risk.

We will consider the advice of statutory and local consultees in considering applications affecting designated and other heritage assets.

SAFEGUARDING MINERAL DEPOSITS

4.5.18 Government policy requires the City Council to identify potential mineral locations to be safeguarded for future generations, even if the mineral is not being worked due to market conditions or current site restraints.

4.5.19 The most recent available data indicates that along the River Soar valley from Aylestone in the south to Birstall in the north there are river terrace deposits that could contain sand and gravel.1 Leicester may also have extensive gypsum deposits in the south west of the City and brick clay deposits in the north east, however it is considered that due to the extensive size of workings required to extract these minerals no areas in the City exist where it would be possible now or in the foreseeable future to sustainably extract these minerals.

4.5.20 The undeveloped areas with potential for sand and gravel extraction are extremely constrained, as they fall within the river and canal corridor where the sites are in active leisure or nature conservation use and protected by green wedge
designations. Because of this protection it is not expected that extraction will happen in the life of this plan, but the sites will be available to future generations for mineral extraction should circumstances change. Sites to be safeguarded will be identified in the Site Allocations and Development Management Policies DPD.1

4.6 MANAGEMENT AND DELIVERY OF DEVELOPMENT

4.6.1 This section includes Core Strategy Policy 19 on Infrastructure and Developer Contributions, an Implementation Plan and a Monitoring Framework for all the Core Strategy Policies.

Infrastructure

4.6.2 Generally, infrastructure has been defined as “the basic physical and organisational structures (e.g. buildings, roads and power supplies) needed for the operation of a society”. It is important to ensure that new development is adequately supported by the provision of appropriate infrastructure and that new development should not overburden existing infrastructure. Delivering infrastructure on time is therefore important in ensuring that local services, facilities and the transport network can cope with added demand that arises from housing growth and other new development. Infrastructure will be delivered as an integral part of a development, by contributions towards those needs, and through funding from relevant providers and partners.

4.6.3 In line with the guidance in Planning Policy Statement 12, the City Council has prepared with Leicestershire County Council a ‘Growth Infrastructure Assessment’ (GIA) covering the Leicester and Leicestershire Housing Market Area. The Growth Infrastructure Assessment examines the infrastructure requirements arising from growth, how much this costs, how it is to be funded and how it might be delivered.2

4.6.4 The assessment looks at ‘primary infrastructure’ which enables households to function within a wider community. This is: Transport, Education, Health, Social Services, Green Infrastructure/leisure/parks, Flood Defence, Emergency Services, Utilities (telecommunications, electricity, gas, water, sewage), Waste Management, Libraries and Cultural and Community Facilities. A schedule of the key infrastructure to support growth is included at Appendix 7.

Delivery and Funding

4.6.5 The GIA shows that a very large investment in infrastructure is required to deliver housing growth within the City and the HMA. This is coupled with a lower percentage of the costs being covered by mainstream funding and developer contributions. The prevailing economic conditions from the end of 2008 provide the backdrop for the delivery of housing growth and associated infrastructure and the critical factor for the delivery of housing targets will be the length of time the housing market remains depressed.

4.6.6 The challenge will therefore be to align housing growth, economic restructuring and infrastructure provision to deliver social and economic objectives.
This will require an amalgam of strategic, policy and management responses which the GIA highlights. The Council will therefore look to work closely with partners, including neighbouring authorities and service providers, to get cross agency co-ordination, in order to focus mainstream funding to improve the viability of development, examine the use of public/private partnerships and also consider prioritising government funding such as New Growth Point funding.

4.6.7 Governance arrangements across the Housing Market Area have been established to steer and co-ordinate the delivery of infrastructure. The Leicester and Leicestershire Leadership Board and the Sub Regional Housing, Planning and Infrastructure Group will oversee the strategic and delivery linkages required to achieve these outcomes. Prospect Leicestershire has been established as a new economic development company charged with delivering housing growth.

**Developer Contributions**

4.6.8 Where new development creates a need for new or improved infrastructure, contributions from developers will be sought to make the development acceptable in planning terms. Contributions from a particular development will be fairly and reasonably related in scale and kind to the relevant scheme. As part of the production of the Site Allocations and Development Management Policies DPD the City Council will engage with all social and other infrastructure providers to prepare a comprehensive and detailed policy framework for the negotiation of appropriate contributions from developers.

4.6.9 The Community Infrastructure Levy Regulations came into effect in April 2010. The CIL is based on capturing increases in the value of land or property arising as a result of development. The City Council will consider whether it is appropriate to use the CIL as a mechanism for funding infrastructure including its implementation across the Housing Market Area.

---

**CS POLICY 19. INFRASTRUCTURE AND DEVELOPER CONTRIBUTIONS**

New development must be supported by the required infrastructure at the appropriate stage. The City Council will work in partnership with infrastructure providers, grant funders and other delivery agencies in seeking the provision of the necessary infrastructure to support new development.

Developer contributions will be sought also where needs arise as a result of the development either individually or collectively. Contributions will be phased or pooled to ensure the timely delivery and implementation of the necessary physical, social and environmental infrastructure. Where required, developers will need to contribute to the needs of the whole development.

Contributions will be used to mitigate the adverse impacts of development and the City Council will where appropriate, seek to secure such measures through planning obligations.
IMPLEMENTATION PLAN

4.6.10 To implement Core Strategy Policies the Council will need to work with partners, take account of existing strategies and prepare additional guidance. Appendix 6 sets out the implementation strategy for each policy.

MONITORING FRAMEWORK

4.6.11 Five years from the adoption of the Core Strategy, the policies will be reviewed to ensure that they are continuing to meet the strategic objectives. They will be assessed against the targets and indicators set out below. These include the Government’s LDF Core Output Indicators and relevant indicators from the National Indicators set.

4.6.12 The Core Strategy will be monitored through the Annual Monitoring Report which is produced yearly as part of the Local Development Framework.

APPENDICES
Appendix 1. Explanation of the Role of Local Development Framework Documents

Local Development Framework Documents

**Local Development Scheme:**
Sets out the programme for the preparation of the development plan documents.

**Statement of Community Involvement:**
Sets out the standards the council intends to achieve in relation to involving the community in the preparation and review of Development Plan Documents.

**Annual Monitoring Report:**
Sets out the progress in terms of producing Development Plan Documents and implementing policies.

Development Plan Documents

**Core Strategy:**
Sets the overarching spatial vision and policies to guide development within the City up to 2026, and provides the planning framework for the other Documents listed below.

**Site Specific Allocations:**
Located land to specific uses and provides relevant policy guidance.

**Development Control Policies:**
Sets out development control policies against which planning applications for the development and use of land will be considered.

**Proposals Map:**
Illustrates the geographic extent of policies and proposals on a map.

**Supplementary Planning Documents:**
Provide more detailed guidance on development plan policies.
Appendix 2. Replacement of Local Plan Policies

This table identifies the City of Leicester Local Plan (2006) policies that will be replaced by a Core Strategy policy or saved until they are replaced by the Site Allocations and Development Management Policies DPD.

<td>--------------------------------------------------------------------------------------------------------</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>INTEGRATED SERVICES HUB</strong></td>
<td>A location that hosts a number of services. This could be a number of transport systems such as train and bus stations or other services such as community facilities, shops, offices, etc.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>KEY DIAGRAM</strong></td>
<td>Diagram setting out the broad spatial locations of development within the Core Strategy.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>LEICESTER PARTNERSHIP</strong></td>
<td>Partnership comprising the City Council and other public and private sector bodies. The Leicester Partnership oversees the preparation of the Sustainable Community Strategy (SCS).</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>LCB DEPOT</strong></td>
<td>Development which reused an old Bus Depot to provide starter units for creative industries.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>LIFETIME HOMES</strong></td>
<td>Lifetime Homes are dwellings designed to provide accessible and adaptable accommodation for everyone, from young families to older people and people with a temporary or permanent physical impairment.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>LOCAL CENTRE</strong></td>
<td>Local centres include a range of small shops of a local nature, serving a small catchment. Typically, local centres might include: a small supermarket, a newsagent, a sub-post office, a pharmacy and a hot-food takeaway.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>LISTED BUILDING (NATIONAL LIST)</strong></td>
<td>Buildings of special architectural or historic interest which are recorded on a ‘list’ compiled under the Town and Country Planning (Listed Buildings and Conservation Areas) Act 1990. Special consent is required for development affecting Listed Buildings.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>LISTED BUILDING (LOCAL LIST)</strong></td>
<td>Buildings of local architectural or historic interest which are not listed but recorded on a ‘list’ compiled by the City Council. The designation does not confer a higher level of protection than would be the case with any other non-listed building but implies the Council may be flexible in order to encourage their continued use.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>“MAJOR” DEVELOPMENT</strong></td>
<td>The Government defines major development in terms of a planning application as more than 10 dwellings or site over 0.5 ha. For all other uses floorspace over 1000 sqm or site area over 1 ha.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>MASTERPLAN</strong></td>
<td>A document that sets out the broad development proposals for an area.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>NEW GROWTH POINT</strong></td>
<td>An area or region identified for significant development. Leicester is within the Three Cities and Counties New Growth Point, where government funding will be made available for infrastructure to support major new development.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>ONE LEICESTER (Sustainable Community Strategy)</strong></td>
<td>A 25 year vision for the City set out in Leicester’s sustainable community strategy, ‘One Leicester: Shaping Britain’s Sustainable City’ was adopted by the Leicester Partnership in 2008.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>PARK &amp; RIDE</strong></td>
<td>A scheme which enables motorists to park some distance away from a city centre and then catch a bus for the remainder of their journey.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>PLANNING POLICY GUIDANCE NOTE (PPG) &amp; PLANNING POLICY STATEMENT (PPS)</strong></td>
<td>A series of documents which set out the Government’s national policies on planning issues and the operation of the planning system. PPGs are being replaced by (PPS). Local Planning Authorities must take their content into account when preparing the Development Plan. The guidance may also be material to decisions on individual planning applications and appeals. See also Circulars.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>PROFESSIONAL OFFICE AREA</strong></td>
<td>Located around the Cathedral and New Walk these areas provides high quality premises for small office based business.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>PROSPECT LEICESTERSHIRE</strong></td>
<td>Prospect Leicestershire is the new Economic Development Company (formed in 2009 to replace the Leicester Regeneration Company) charged with delivering physical regeneration and growth, business innovation and support and inward investment across Leicester and Leicestershire.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>PRINCIPAL URBAN AREA (PUA)</strong></td>
<td>The Principal Urban Area (PUA) of Leicester is the City plus the surrounding built up area in Leicestershire, as shown on the Core Strategy Key Diagram. Much of what is commonly perceived as part of Leicester lies within the neighbouring authorities of Charwood, Melton, Harborough, Oadby &amp; Wigston, and Hinckley.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>PUBLIC REALM</strong></td>
<td>Publicly accessible places and buildings. These include streets, squares and parks.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>REGIONAL SPATIAL STRATEGY (RSS)</strong></td>
<td>The planning strategy for the whole of the East Midlands, also known as the Regional Plan.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Term</td>
<td>Definition</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>------</td>
<td>------------</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>REGISTERED SOCIAL LANDLORD (RSL)</td>
<td>A provider of low cost market housing for rent or sale which is accessible to people on low incomes and below the minimum cost of local market housing. Typically these are Housing Associations and Councils.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>RENEWABLE ENERGY</td>
<td>Energy that is derived from a source that does not run out. These include solar, wind, wave, hydro and biomass.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>SCHEDULED MONUMENT</td>
<td>Archaeological sites, monuments or buried remains of national importance, designated by the government.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>SCIENCE PARK</td>
<td>An area specifically devoted to meeting the needs of high technology businesses that may have close links to universities.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>SEQUENTIAL APPROACH</td>
<td>Site identification and selection procedure through which development proposals should be progressed to determine their most sustainable location. It is often referred to as a ‘test’.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>STRATEGIC HOUSING LAND AVAILABILITY ASSESSMENT (SHLAA)</td>
<td>A document that identifies sites and assesses their potential for housing and when they are likely to be developed.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>STRATEGIC HOUSING MARKET ASSESSMENT (SHMAA)</td>
<td>A document that estimates housing need and demand in terms of affordable and market housing, and determines the distribution of need across the plan area.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>SPATIAL OBJECTIVES</td>
<td>Objectives that guide policy to achieve the Core Strategy vision. See Section 3.3.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>STATEMENT OF CONSULTATION</td>
<td>This accompanies the Core Strategy and is available on the council’s website at <a href="http://www.leicester.gov.uk/corestrategy">www.leicester.gov.uk/corestrategy</a>.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>STRATEGIC REGENERATION AREA (SRA)</td>
<td>The central area of Leicester area identified as in need of significant regeneration due to the decline of former uses.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>SUPPLEMENTARY PLANNING GUIDANCE (SPG) / DOCUMENT (SPD)</td>
<td>Guidance which is supplementary to the Development Plan, providing further detail on the type and form of development that will be appropriate in a given area. SPG was prepared under the former planning system and is now being replaced by SPD.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>SUSTAINABILITY APPRAISAL</td>
<td>The process of appraising the economic, environmental and social effects of a plan to allow decisions to be made that accord with susutainable development. It accompanies this document and is available on the council’s website at <a href="http://www.leicester.gov.uk/corestrategy">www.leicester.gov.uk/corestrategy</a>.</td>
<td></td>
<td></td>
<td></td>
</tr>

Appendix 9. Addendum Note to Update Paragraph 1.9

The Core Strategy was prepared to be in conformity with the East Midlands Regional Spatial Strategy (RSS). On 6th July 2010 the Secretary of State announced the revocation of the RSS. A subsequent High Court judgment on 10th November 2010 had the effect of re-instating the RSS as part of the Development Plan. In response the Coalition Government has confirmed its intention to abolish Regional Strategies in the forthcoming Localism Bill.

As the Core Strategy was examined during the period between 6th July and 10th November 2010, it refers to the ‘former Regional Strategy’. However the Council has not departed from the RSS housing figure for the area which is based on evidence, supplied by the Council, on the capacity of the area to accommodate housing growth. Therefore the RSS housing figures (and figures for the provision of sites for Gypsies and Travellers) are retained in the Core Strategy.
